FOREWORD

Central Ground Water Board has been monitoring ground water levels and ground water quality of the country since 1968 to depict the spatial and temporal variation of ground water regime. The changes in water levels and quality are result of the development pattern of the ground water resources for irrigation and drinking water needs. Analyses of water level fluctuations are aimed at observing seasonal, annual and decadal variations. Therefore, the accurate monitoring of the ground water levels and its quality both in time and space are the main pre-requisites for assessment, scientific development and planning of this vital resource.

Central Ground Water Board, North Western Region, Chandigarh has established Ground Water Observation Wells (GWOW) in Haryana State for monitoring the water levels. As on 31.03.2016, there were 1176 Ground Water Observation Wells which included 517 dug wells and 659 piezometers for monitoring phreatic and deeper aquifers. In order to strengthen the ground water monitoring mechanism for better insight into ground water development scenario, additional ground water observation wells were established and integrated with ground water monitoring database. As a result, total number of ground water observation wells as on 31.03.2017, has reached 1190 ground water observation wells which include 521 dug wells and 669 piezometers for monitoring phreatic aquifers including 47 deep piezometers for monitoring confined/ semi- confined aquifers. These observation wells are being monitored four times a year in the months of May, August, November and January, being undertaken simultaneously throughout the country. This report presents the observations and findings for the period from May 2016 to January 2017.

Shri M. L Angurala, Scientist 'D' has put his concerted efforts to compile and analyse the data and prepare the report in the present form. The chapter on Chemical quality of ground water has been compiled and contributed by Mrs. B. P. Singh, Scientist 'D'.

This report incorporates all the analytical data on ground water monitoring done in Haryana State and provides valuable information on prevailing ground water regime to the user agencies and other stakeholders as well.

GROUND WATER YEAR BOOK

HARYANA STATE

2016 – 2017

1 INTRODUCTION

The State of Haryana is in North India with its capital at Chandigarh. The Haryana State is located between North Haryana is a landlocked state in northern India. It is between 27°39' to 30°35' N latitude and between 74°28' and 77°36' E longitude covering an area of 44,212 sq. km. The state is sub-divided into nine physiographic units and is drained by two major rivers Ghaggar and Yamuna. It was carved out of the former state of Punjab on 1 November 1966 on the basis of language distribution. The name Haryana is found in the works of the 12th century AD Apabhramsha writer Vibudh Shridhar (VS 1189–1230). It is bordered by Punjab and Pradesh to the north and by Rajasthan to the west and south. The river Yamuna defines its eastern border with Uttar Pradesh. Haryana surrounds the country's capital Delhi on three sides, forming the northern, western and southern borders of Delhi. Consequently, a large area of south Haryana is included in the National Capital Region for purposes of planning for development.

The state was home to prominent sites of the Indus Valley and Vedic Civilizations. Several decisive battles were also fought in the area, which shaped much of the history of India. These include the epic battle of Mahabharata at Kurukshetra mentioned in Hindu mythology (including the recital of the Bhagavad Gita by Lord Krishna), Banganga or the Bhishma Kund, a legend attached to this water tank says that, when Bhishma lay on his bed of arrows, he felt thirsty and asked for water. To fulfill his desire, Arjuna immediately shot an arrow into the ground and let loose a stream of gushing water. This is how the BhishmaKund is believed to come into existence and the three battles of Panipat. Haryana was administered as part of the Punjab province of British India, and was carved out on linguistic lines as India's 17th state in 1966. Haryana is now a leading contributor to the country's production of food grains and milk. Agriculture is the leading occupation for residents of the state with the flat arable land irrigated by submersible pumps and an extensive canal system. There are four irrigation systems in the state namely

- | | |
|--------------------------|-------------------|
| 1. Western Yamuna canal, | 3. Agra canal and |
| 2. Bhakra canal, | 4. Ghaggar canal |

Haryana contributed heavily to the [Green Revolution](#) that made India self-sufficient in food production in the 1960s.

1.1 Physiography

The altitude of Haryana varies between 700 and 3600 ft (200 meters to 1200 meters) above sea level. An area of 1,553 km² is covered by forest. Haryana has four main geographical features.

- The [Yamuna-Ghaggar](#) plain forming the largest part of the state
- The [Shivalik Hills](#) to the northeast
- Semi-desert sandy plain to the southwest
- The [Aravalli Range](#) in the south

1.2 Geohydrological Conditions

On the basis of Geohydrological conditions as well as groundwater movement and surface drainage pattern, the entire state is divided into the following basins:-

1. Yamuna basin; (a) Upper, (b) Lower
2. Ghaggar Basin; (a) Upper, (b) Lower
3. Inland Alluvial Basin (Chautang and others)
4. Krishnawati Basin
5. Sahibi Basin
6. Landoha Nala Basin
7. Kanti Sub Basin (Loharu Satnali area)

Ground water occurs both under confined and unconfined conditions in the alluvial formation whereas it is mostly under un-confined conditions in Siwaliks and piedmont deposits and semi-confined conditions in hard rocks.

1.3 Rivers of Haryana

The [Yamuna](#) flows along the state's eastern boundary while the ancient [Sarasvati River](#) is said to have flowed from [Yamuna Nagar](#), but has now disappeared. Haryana's main seasonal river, the [Ghaggar](#) rises in the outer [Himalayas](#), between the Yamuna and the [Sutlej](#) and enters the state near [Pinjore](#) in the [Panchkula](#) district. Passing through [Ambala](#) and [Hissar](#), it reaches [Bikaner](#) in [Rajasthan](#) and runs for 460 km before disappearing into the deserts of Rajasthan. Important tributaries include the [Chautang](#) and [Tangri](#). The seasonal [Markanda River](#) is a stream, which in ancient times

was known as the Aruna. It originates from the lower [Siwaliks Hills](#) and enters Haryana west of [Ambala](#). During monsoons, this stream swells into a raging torrent notorious for its devastating power. The surplus water is carried on to the Sanisar Lake where the Markanda joins the Sarasvati and later the Ghaggar. [Shahbad](#) Markanda town is situated on its bank. Mentioned in the epic [Shatapatha Brahmana](#) as the [Drishadwati](#), the [Sahibi River](#) originates in the [Jaipur](#) district in Rajasthan. However, before seismic activities some 7,500 years ago in the [Aravalli Hills](#), the river brought water from as far as the [Ajmer](#) district. Gathering volume from about a hundred tributaries in Rajasthan and the [Mewat](#) areas, it reaches voluminous proportions, forming a broad stream around [Alwar](#) and Patan. Further flowing via [Rewari District](#) and [Dharuhera](#), it reaches [Jhajjar](#) then splits into two smaller streams, finally reaching the outskirts of Delhi and flowing into the Najafgarh Lake that flows into the Yamuna through the Najafgarh drain. Recently hardly any water flows in Sahibi as most of the water is impounded in small check dams upstream in the [Alwar](#) district of Rajasthan and the Masani barrage in Rewari district, built on this river on NH 8 (Delhi-Jaipur highway). Three other rivulets in and around the Mewat hills, the Indori, Dohan and Kasavati all flow from East to West.

1.4 Hydrometeorology

The state receives its rainfall primarily through southwestern monsoon. Winter showers are also quite common. The average annual rainfall varies forms little as 313 mm in areas bordering Rajasthan in South-western parts of the state over 862 mm in the North-Eastern parts near Siwalik Hills bordering Himachal Pradesh. In more than 50% of total area average rainfall is less than 500 mm. Rainfall progressively decreases towards South and southwest districts. Drought conditions are common in Mahendragarh, Rewari, Bhiwani, Hissar and Sirsa. The state of Haryana experiences extreme winter and summer. The minimum and maximum temperatures recorded in the state are 2.0 c (Narnaul Dec. 2000 and 45.6C Hissar May, 2000) respectively. Winter frost is quite common during the months of December and January. Minimum and maximum wind speeds recorded are 0.4 Km per hour and 5.3 Km per hour. The mean wind speed of the state is reported to be 2.9 Km per hour. The mean relative humidity on an average varies from 30% in April to 90% in August, the annual average being 60%. As a whole the climate of the state is semi-arid to sub tropical. Aridity is more in South Western parts of the state bordering Rajasthan.

2.0 HYDROGEOLOGICAL SETUP

Three geological groups are represented in the state viz. Pre-Cambrian, Tertiary and Quaternary. The Quaternary group comprises of Alluvium which occupies 98% of the area of the state. The tertiary group is represented by the outermost zone of the Siwalik system composed mainly of sandstones, clay and boulders. The rocks of Pre-Cambrian age which form part of the Aravalli hill ranges are exposed in Gurgaon, Mewat and Faridabad districts and as small outcrops in other Southern districts. The thickness of alluvium deposits decreases from North to South. All the three major physiographic units viz. Peninsula, Extra-Peninsula and Indo-Gangetic areas, terminating in the hard rock formations of Delhi systems (Pre-Cambrian age) towards South, Siwaliks system (Tertiary age) in the North and in between the alluvial formations (Recent to sub recent age) are observed in the state. The general geological succession of the various units of the Peninsula and Indo-Gangetic plains traversing the Haryana state are given below (table-1).

Table:-1 Generalized Stratigraphy of Haryana State (after GSI, 2012)

| Age | Super Group | Group/Formation | Lithology |
|------------------|---------------------|---|---|
| Quaternary | | Older and Newer Alluvium and Aeolian Deposits | Grey and brown sand, silt, silt-clay, clay with calcrete, limestone and gypsum. |
| Tertiary | Siwalik Super Group | Upper Siwalik | Boulder conglomerate, sandstones, clay/ mudstone and pebble beds. |
| | | Middle Siwalik | Sandstone with variegated clay/mudstone. |
| | | Lower Siwalik | Sandstone, mudstone/ shale |
| | | Sabathu | Fine-grained sandstone, clay and limestone. |
| Pre-Tertiary (?) | | Tundapathar 'Series' Lower (Paleozoic Unconformity) | Stromalitic limestone, Tosham rhyolite, Granite (Erinpura), migmatite, ultramafic and pegmatite. |
| Proterozoic | Delhi Group | Ajabgarh Group (Divided into Formations) | Quartzite and basic flows, mica-schist, carbonaceous phyllites and slates, calc-schist, dolomite, marble, calc-silicate, amphibolite, hornblende-schist, phyllite. 5 |
| | | Alwar Group | Quartzite, conglomerate, amphibolite, mica-schist and arkosic quartzite. |

In the extra peninsular region (northern part of Panchkula district) Siwalik System (Upper Tertiary) and Sabathu Series (Lower Tertiary) are exposed. Sabathu comprises of greenish grey and red gypseous shales with thin bands of sand stones and limestone. Shales and limestone are richly fossiliferous. Siwaliks system comprises of mainly

greywacke, sandstones, grits, clays, siltstones, conglomerates and pseudo-conglomerates. These are fluviatile deposits and are rich in mammalian fossils.

The area in Panchkula, Ambala & Yamunanagar is underlain by the 'Kandi, Sirowal and the Alluvium. The Kandi belt which forms the upper higher portions of the composite fan deposits is 2 to 4 kms wide running more or less parallel to the Shivalik foothills. The sediments comprise boulders, pebbles, gravel and sand with clays mixed in varying proportions. Sirowal belt and the adjoining Gangetic plain on the south of the Kandi belt are underlain by silt, fine to medium sand and clays. Gravel and pebbles also occur occasionally. The area in Gurgaon district is underlain by the rocks of Delhi system and by Quaternary alluvium. The Ajabgarh shales and quartzite form the basement in the western part of the area where the thickness of alluvium is very less. In Hissar and Bhiwani districts area is underlain by unconsolidated sediments of Quaternary age. The sediments comprise sand, silt clay and kankar. In Sonipat, Jind, Karnal and Kurukshetra districts the area is underlain by alluvium deposits of Quaternary age. Alluvium comprises clay, silt, sands of various grades, kankar, gravel and pebbles. The alluvium deposits are generally lenticular in shape. In Mohindergarh and part of Bhiwani districts the following geological succession is met. Recent to sub Recent- Alluvium and windblown sands etc, Post Delhi intrusive- Pegmatite, quartz veins, granites etc. Algonquian Delhi system-Ajabgarh Series Kushalgarh Limestone, Alwar Series. The alluvium in the area belonging to the Older Alluvium comprises of sand, silt, clay loam and kankar. Newer alluvium is mainly confined to the sides of the river natural water courses. The alluvium is the fresh water deposit of the Indo-Gangetic river system. The sub-aerial deposits are represented by the talus material on the hill slopes and windblown sands. Rohtak district is underlain by alluvium deposits of Quaternary age. The alluvium overlies the rocks of Algonquians system outcrops of which are seen outside the district. The alluvium consists of clay, silt and various grades of sand. Windblown sand occurring as sand dunes is often seen overlaying the alluvium in various parts of the district.

The unconsolidated alluvial sediments cover around 98% of the state while hard rock's cover just around 2% area of the state. Alluvial deposits are of older and newer types and consist chiefly of clay, silt and fine to medium sand. Other deposits are piedmont deposits, which are confined to a narrow zone, about 2 to 4 kms wide, between Siwalik Hills and alluvial plains. Sand-dunes are found in the districts of Bhiwani, Mohindergarh, Hissar and

Sirsa Coarse sand, gravels and boulders are found to occur in piedmont areas and in the adjacent alluvial tracts. These deposits have developed in the north part of Ambala district. The thickness of alluvial sediments is more than 600 m. and along Yamunanagar-Karnal stretch it is reported to be more than 3000 m. However, the thickness of sediments progressively decreases towards Delhi and hard rock areas of Bhiwani, Gurgaon, Faridabad and Mohindergarh districts.

3.0 GROUND WATER REGIME MONITORING

Central Ground Water Board, North Western Region, Chandigarh has established Ground Water Observation Wells (G WOW) in Haryana State for monitoring the water levels. As on 31.03.2016, there were 1176 Ground Water Observation Wells which included 517 dug wells and 656 piezometers for monitoring phreatic and deeper aquifers. However, with establishment of new ground water observation wells including dug wells and piezometers, and reconciliation of ground water observation wells, total number of ground water observation wells as on 31.03.2017, has reached 1190 ground water observation wells which include 517 dug wells and 659 piezometers for monitoring phreatic aquifers including 47 deep piezometers for monitoring confined/ semi- confined aquifers.

The district wise Ground Water Observation Wells are shown in Plate-1 and split is given in Table 2. The density of the observation wells being monitored in the state of Haryana is given in Table 3 and depicted in Plate 2.

3.0 BEHAVIOUR OF GROUND WATER LEVEL

In order to assess the quantitative change in ground water resources, water levels as a routine were monitored four times May 2016, August 2016, November 2016 and January 2017 and compared with previous water level records to ascertain the change in ground water level scenario.

3.1 DEPTH TO WATER LEVEL

The behaviour of water level in all four seasons May 2016, August 2016, November 2016 and January 2017 along with maps is discussed in following paragraphs and data is presented in annexure-I. The maximum and minimum water levels recorded in four seasons is given below Table 4.

Table 4 Range of depth to water levels during the period

| Range | May 2016 | August 2016 | November 2016 | January 2017 |
|---------|---|---|---|---|
| Minimum | 0.51 m bgl Sankol (Jhajjar district) | 0.14 m bgl Dhanana (Bhiwani district) | 0.18 m bgl Subnah (Jhajjar district) | 0.89 m bgl Dhanana (Bhiwani district) |
| Maximum | 99.50 m bgl Kultajpur-DW (Mahendragarh) | 71.30 m bgl Mangala (Sirsa) | 98.50 m bgl Kultajpur-DW (Mahendragarh) | 50.86 m bgl Landi-PZ (Kurukshetra) |

3.1.1 MAY 2016

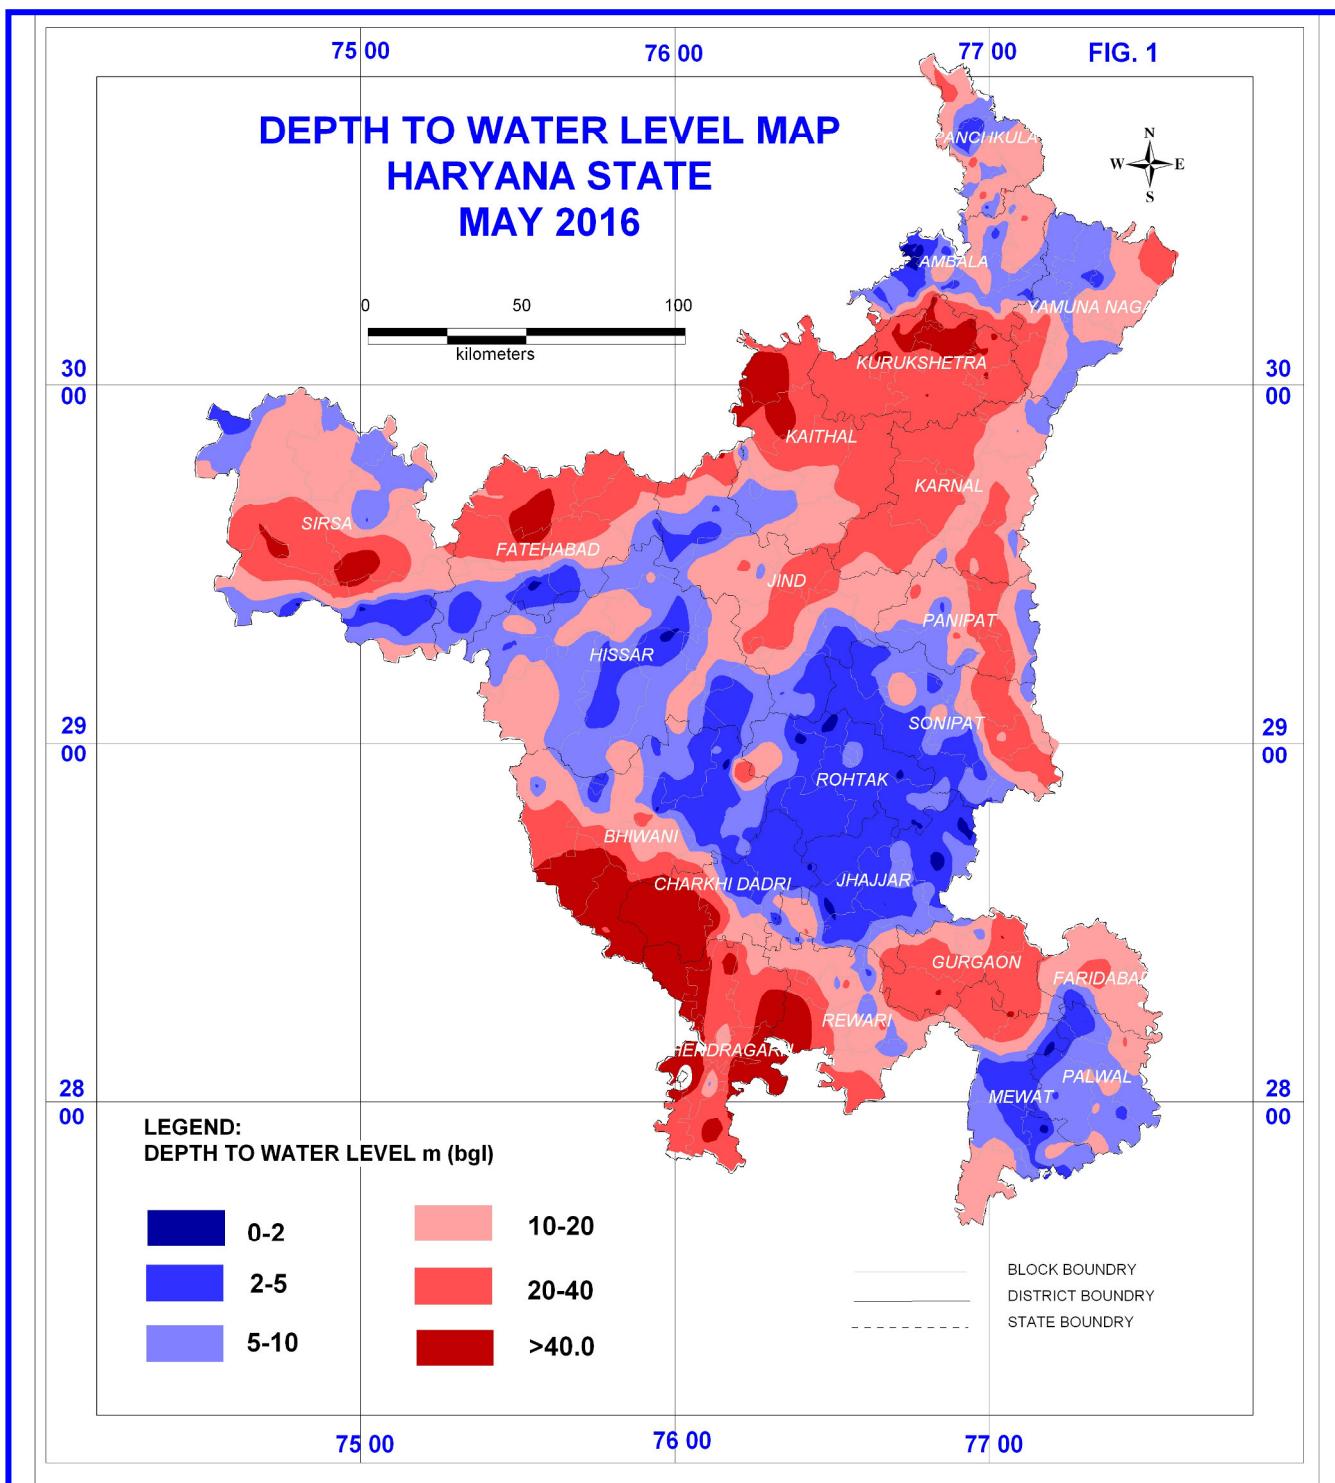

The behavioral pattern of depth to water level data of May 2016 is discussed below along with depth to water level map (Fig.1) and data are presented in Annexure-1 (Col-4).

The depth to water level during May 2016 varies from 0.51 m bgl at Sankol in Jhajjar district to 99.50m bgl at Kultajpur-DW in Mahendragarh district.

Very shallow (0-2m) water levels conditions are observed in isolated patches in Jhajjar, Sonipat and Rohtak districts. More than 3% wells and 1% area of state fall in this group which indicates water logging conditions. Shallow water levels (2-5m) observed in 19% wells and 15% area mainly in the central part and in few isolated patches in Sonipat, Rohtak, Jhajjar, Charkhi Dadri, Bhiwani, Hissar, Sirsa, Fatehabad, Palwal, Mewat districts. Moderate water levels (5-10m) occur in 21% wells covering 23% of area of the state. Moderately deep water levels of 10-20m are observed in nearly 26% wells and 29% of the area falling in Panchkula, Ambala, Yamunanagar, Karnal, Panipat, Sonipat, Kaithal, Jind, Fatehabad, Sirsa Hissar, Bhiwani, Rewari, Mahendragarh, Gurgaon and Faridabad districts. Deep water levels of 20-40m have been recorded in 24% of wells and about 25% area in Kurukshetra, Kaithal, Karnal, Panipat, Sonipat, Jind, Fatehabad, Sirsa, Bhiwani, Rewari, Mahendragarh and Gurgaon districts. Very Deep water levels (>40m) also occur in less than 7% of the wells and 7% area falling in Kurukshetra, Kaithal, Bhiwani and Mahendragarh districts & isolated patches in Fatehabad and Sirsa districts.

| Depth to water level range | Wells monitored | | Area covered | |
|----------------------------|-----------------|------|--------------|------|
| | No. | %age | Sq. Km. | %age |
| 0-2 | 30 | 3 | 237 | 1 |
| 2-5 | 182 | 19 | 6817 | 15 |
| 5-10 | 196 | 21 | 10105 | 23 |
| 10-20 | 241 | 26 | 12710 | 29 |
| 20-40 | 226 | 24 | 11229 | 25 |
| >40 | 64 | 7 | 3116 | 7 |

FIG. 1

3.1.2 AUGUST 2016

The behavioral pattern of depth to water level data of August 2016 discussed below along with depth to water level map (Fig.2) and data are presented in Annexure-1 (Col-5).

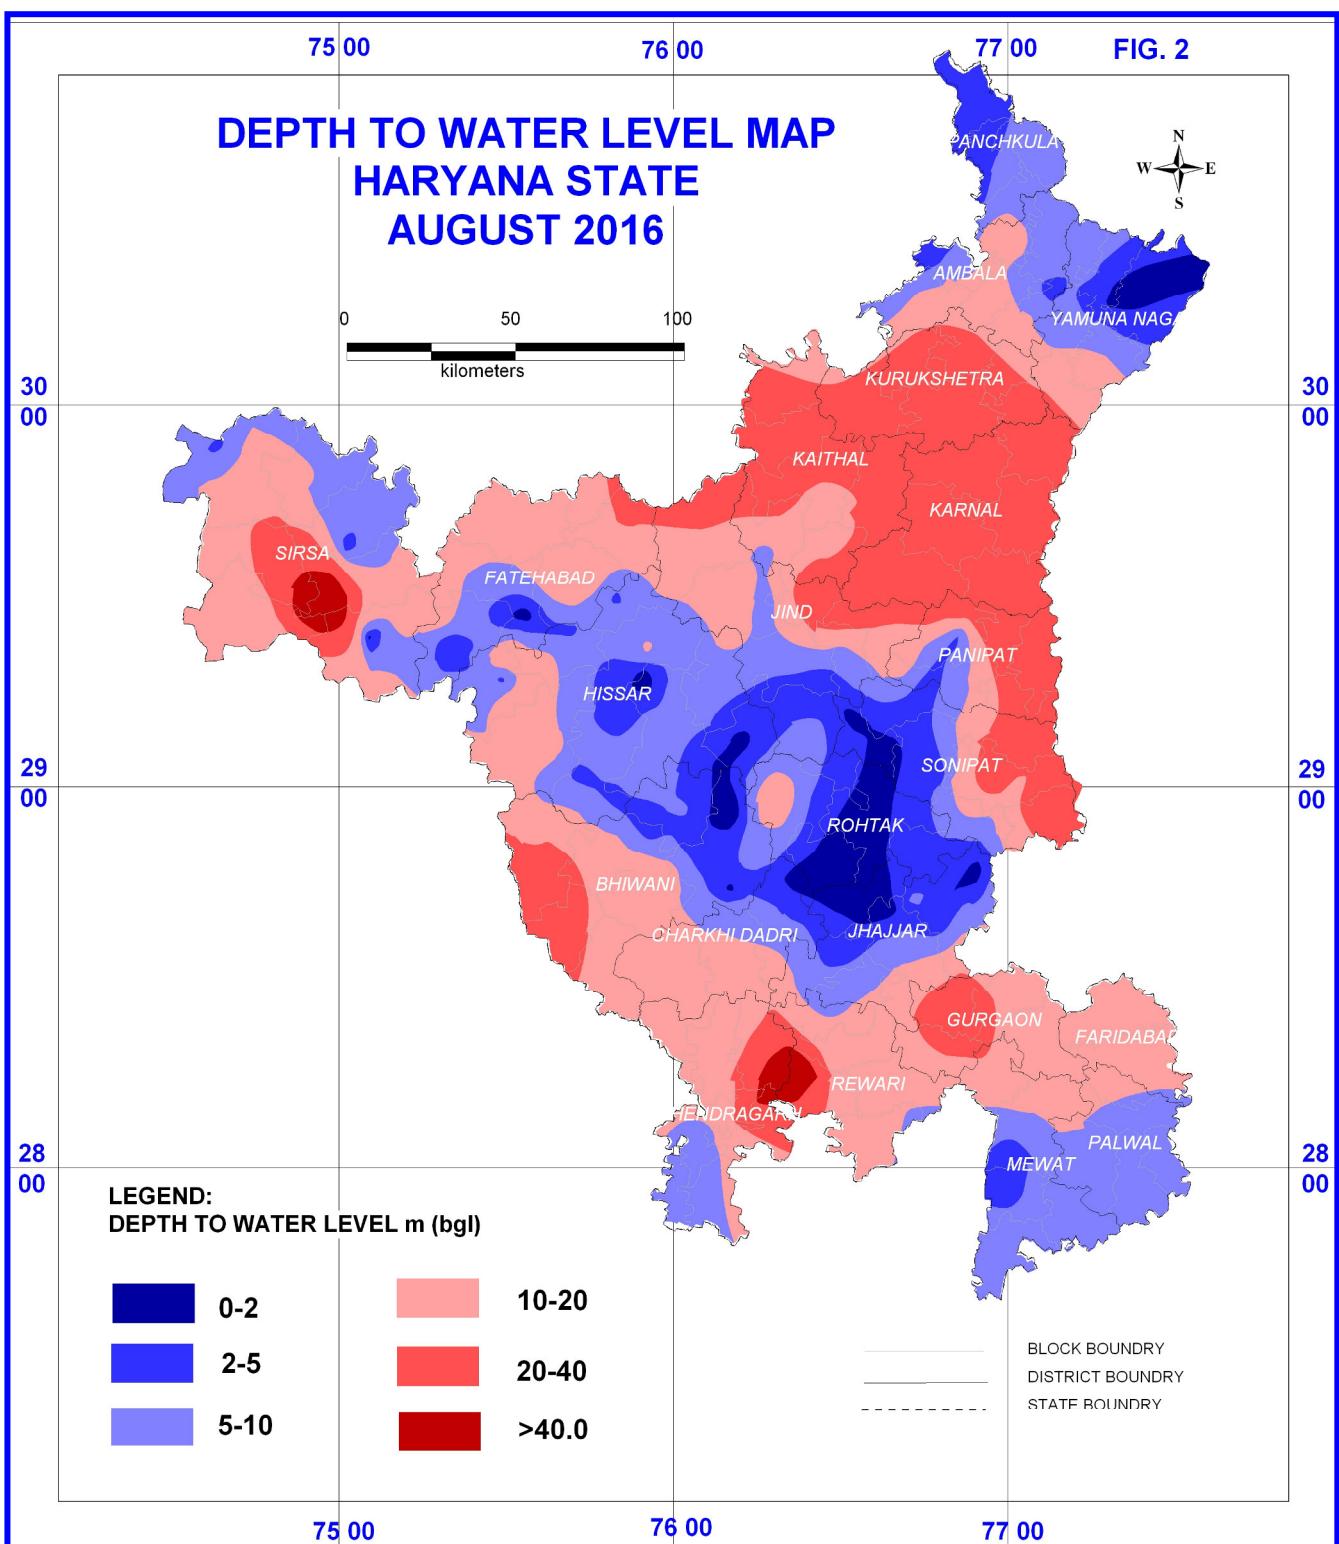

The depth to water level during August 2016 varies from 0.14m bgl at Dhanana in Bhiwani district to 71.30 m bgl at Mangala in Sirsa district.

Very shallow (0-2m) water levels conditions are observed in small pockets in the central part of the state comprising Jhajjar Sonipat and Rohtak districts. More than 10% wells and 4% area of state fall in this group which indicates water logging conditions. Shallow water levels (2-5m) observed in 21% wells and 12% area mainly in the central part and in few isolated patches in Sonipat Rohtak, Jhajjar, Charkhi Dadri, Bhiwani, Hissar, Fatehabad and Mewat districts. Moderate water levels (5-10m) occur in 31% wells covering 27% of area covering south and south central parts of the state.

Moderately deep water levels of 10-20m are observed in nearly 24% wells and 34% of the area falling in Ambala, Yamunanagar, Sonipat, Panipat, Jind, Fatehabad, Sirsa Hissar, Bhiwani, Charkhi Dadri, Mahendragarh, Rewari, Gurgaon and Faridabad districts. Deep water levels of 20-40m have been registered in 11% of wells and about 22% area reported from Kurukshetra, Kaithal, Karnal, Panipat, Sonipat, Jind, Bhiwani, Rewari, Mahendragarh and Gurgaon districts. Very Deep water levels (>40m) also occur in less than 2% of the wells and 1% area falling in Sirsa and Mahendragarh districts.

| Depth to water level range | Wells monitored | | Area covered | |
|----------------------------|-----------------|------|--------------|------|
| | No. | %age | Sq. Km. | %age |
| 0-2 | 13 | 10 | 1593 | 4 |
| 2-5 | 27 | 21 | 5515 | 12 |
| 5-10 | 39 | 31 | 11747 | 27 |
| 10-20 | 30 | 24 | 14965 | 34 |
| 20-40 | 14 | 11 | 9899 | 22 |
| >40 | 3 | 2 | 495 | 1 |

FIG. 2

3.1.3 NOVEMBER 2016

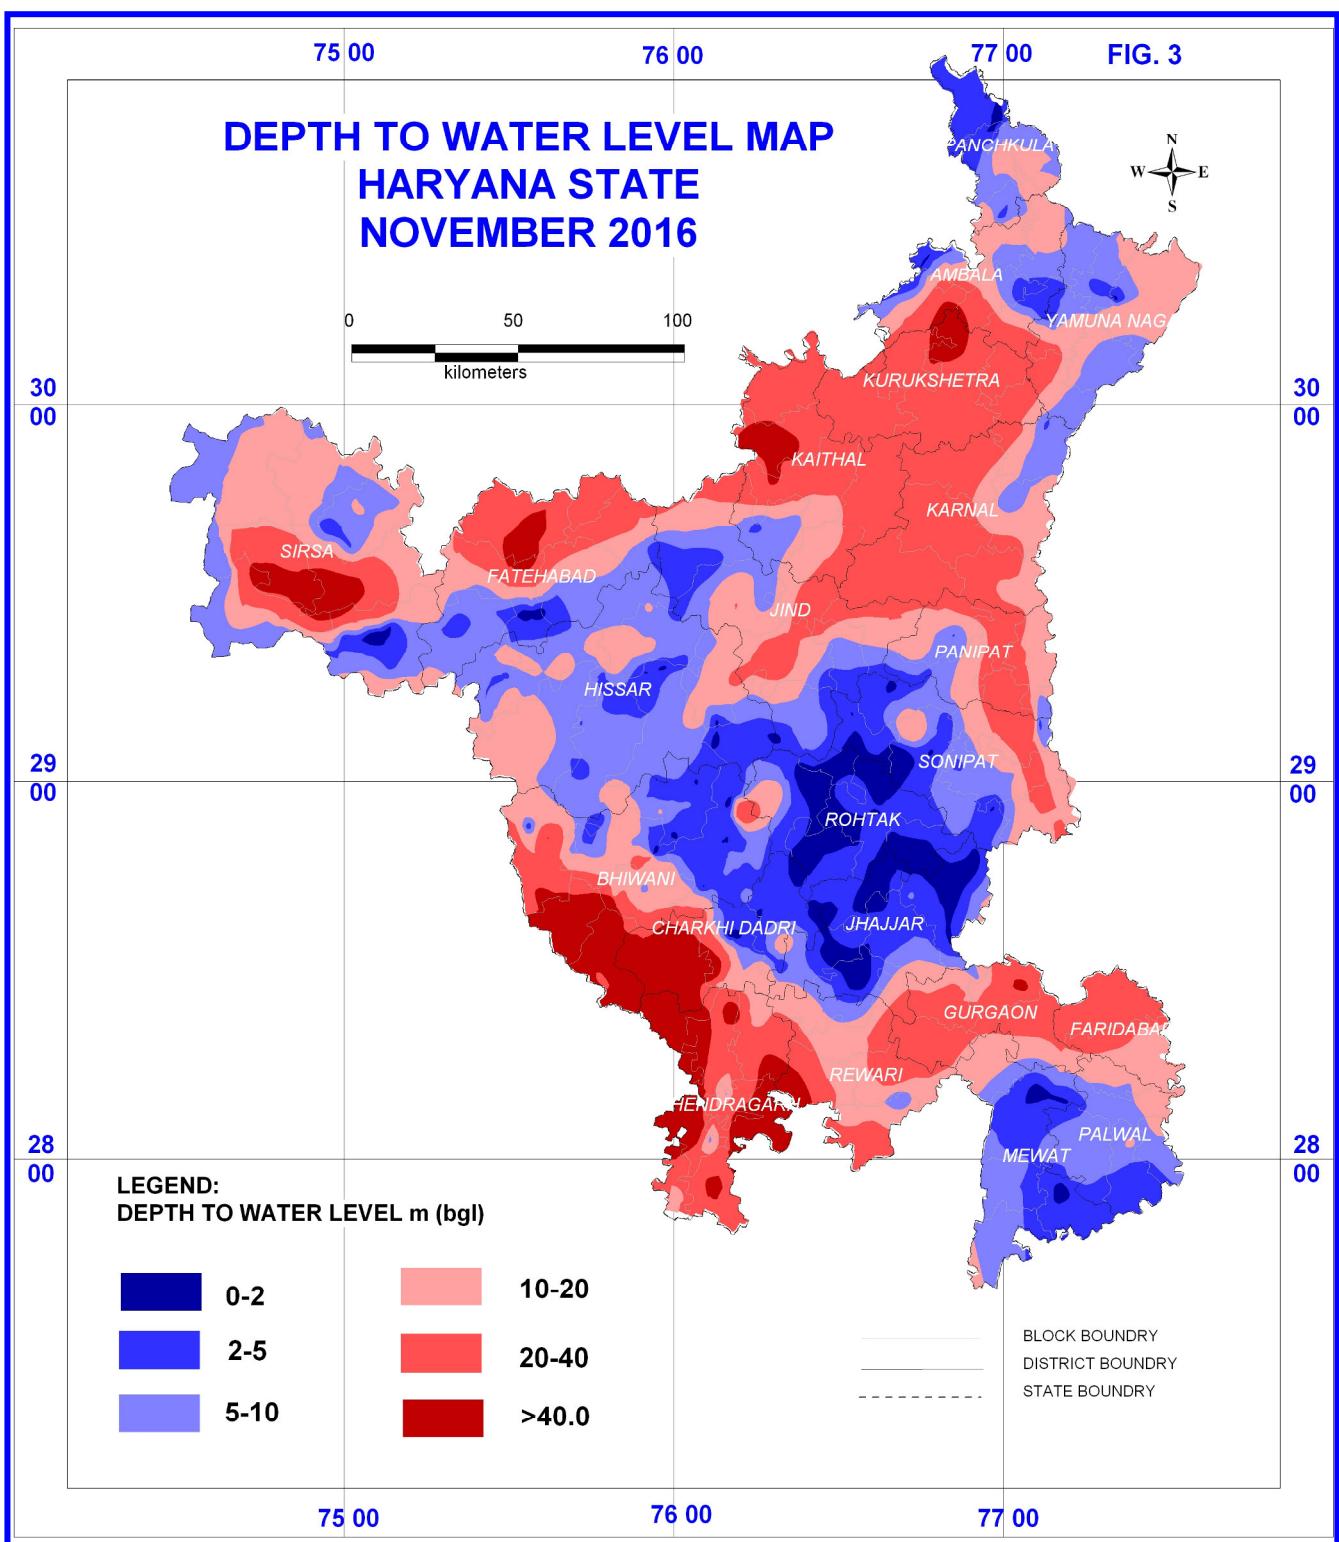

The depth to water level during November 2016 varies from 0.18m bgl at Subnah in Jhajjar district to 98.50m bgl at Kultajpur-DW in Mahendragarh district. The distribution of water level in various ranges is discussed below along with depth water level map for November 2016 (Fig.3). The water level data are presented in Annexure-1 (Col-6).

Very shallow (0-2m) water levels conditions are observed in small pockets in the central part of the state comprising Sonipat, Rohtak, Jhajjar and Mewat districts. 11% wells and 4% area of state fall in this group which indicates water logging conditions. Shallow water levels (2-5m) observed in 19% wells and 15% area mainly in the central part and in few isolated patches in Fatehabad, Palwal Mewat, Jind and Fatehabad districts. Moderate water levels (5-10m) occur in 21% wells covering 23% of area covering parts of Sonipat, Panipat, Jind, Fatehabad, Sirsa, Hissar, Bhiwani, Mewat, Palwal, Ambala and Yamuna Nagar districts of the state.

Moderately deep water levels of 10-20m are observed in nearly 23% wells and 25% of the area falling in Panchkula, Ambala, Yamuna Nagar, Karnal, Kurukshetra, Kaithal, Panipat, Sonipat, Jind, Fatehabad, Sirsa, Hissar, Bhiwani, Charkhi Dadri, Rewari, Mahendragarh, Gurgaon and Faridabad Districts. Deep water levels of 20-40m have been registered in 18% of wells and about 27% area reported from Ambala, Kurukshetra, Kaithal, Karnal, Panipat, Sonipat, Jind, Fatehabad, Sirsa, Bhiwani, Rewari, Mahendragarh, Gurgaon and Faridabad districts. Very Deep water levels (>40m) also occur in less than 8% of the wells and 6% area falling in Bhiwani and Mahendragarh districts & isolated patches in Kurukshetra, Kaithal, Fatehabad and Sirsa districts.

| Depth to water level range | Wells monitored | | Area covered | |
|----------------------------|-----------------|------|--------------|------|
| | No. | %age | Sq. Km. | %age |
| 0-2 | 57 | 11 | 1593 | 4 |
| 2-5 | 102 | 19 | 6752 | 15 |
| 5-10 | 116 | 21 | 10144 | 23 |
| 10-20 | 126 | 23 | 11126 | 25 |
| 20-40 | 96 | 18 | 11736 | 27 |
| >40 | 44 | 8 | 2863 | 6 |

FIG. 3

3.1.4 JANUARY 2017

The behavioral pattern of depth to water level data of January 2017 discussed below along with depth to water level map (Fig.4) and data are presented in Annexure-1 (Col-7).

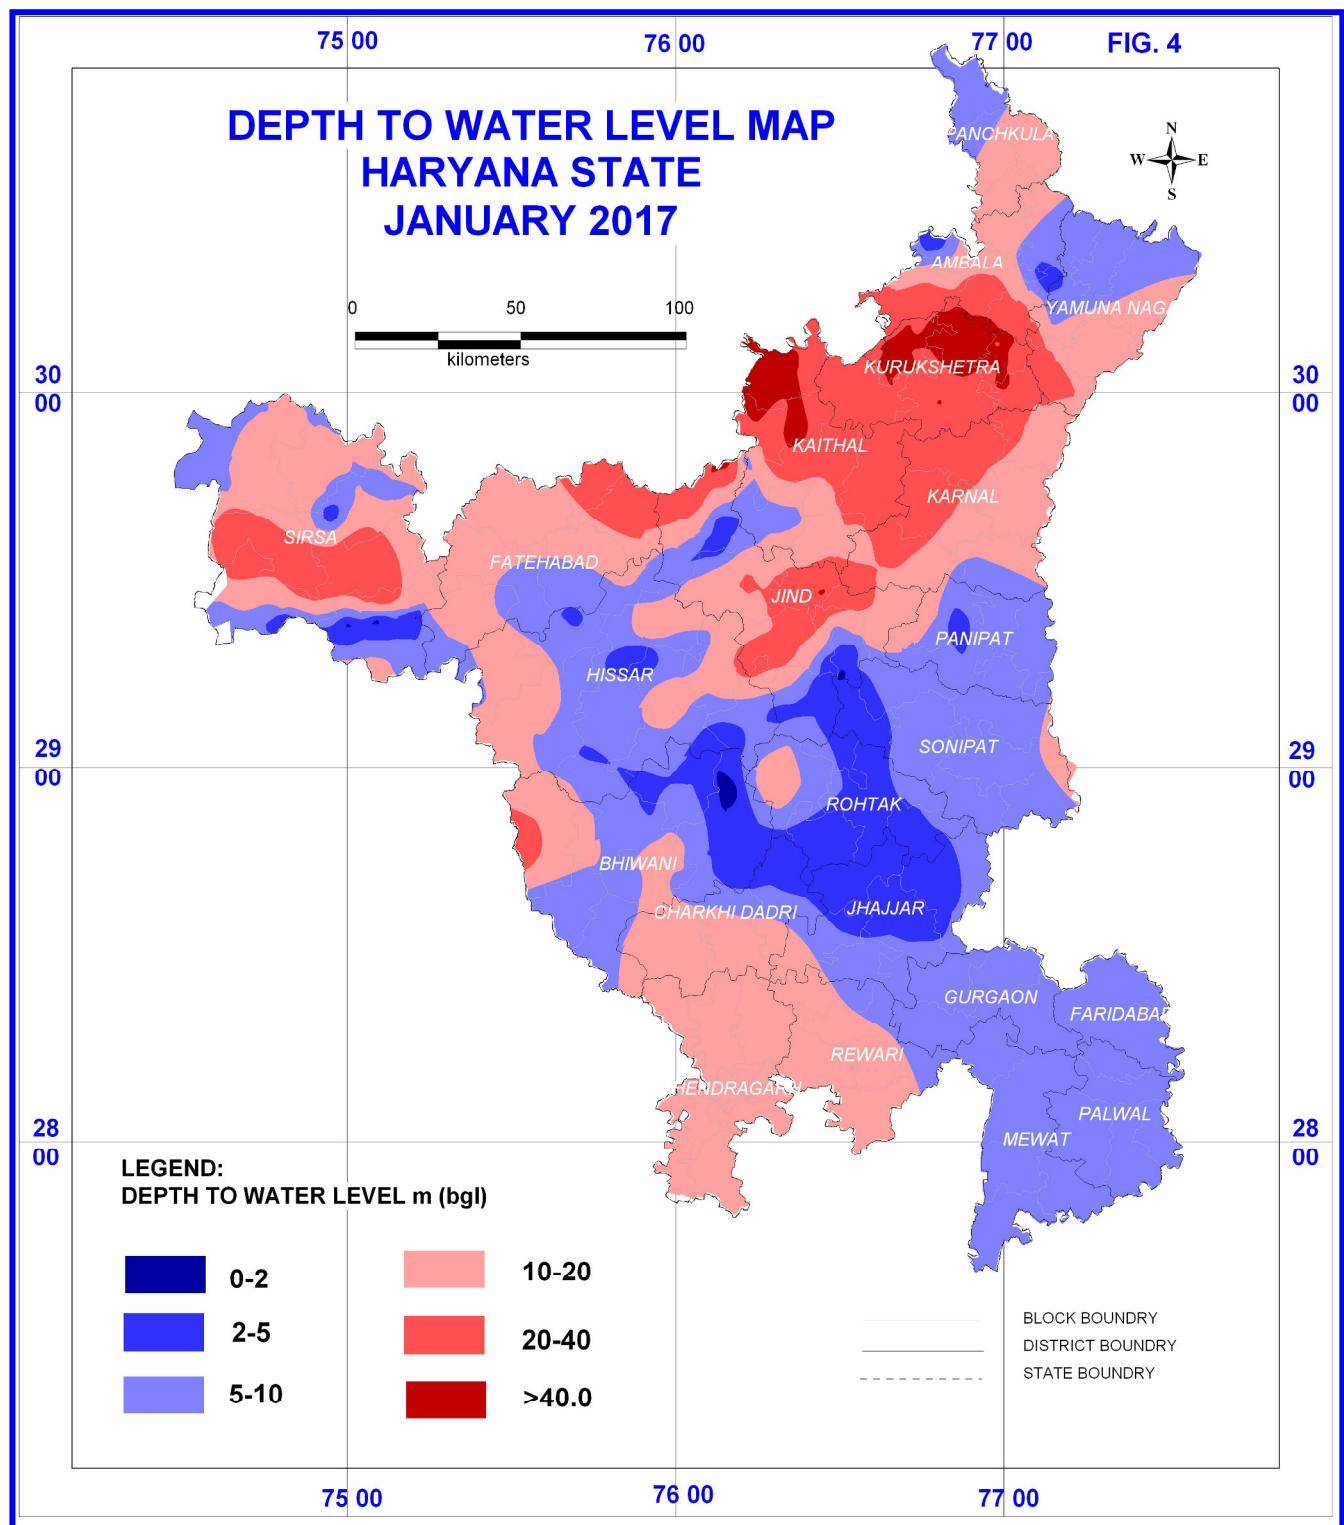

The depth to water level during January 2017 varies from 0.89 m bgl at Dhanana in Bhiwani district to 50.86 m bgl at Landi in Kurukshetra district.

Very shallow (0-2m) water levels conditions are observed in 3% wells and <1% area of state fall in this group which indicates water logging conditions. It is observed in central parts, Sonipat and Rohtak districts of the state. Shallow water levels (2-5m) observed in 11% wells and 10% area mainly in the central Haryana covering parts of Sonipat, Rohtak and Jhajjar districts, western haryana in parts of Hisaar and Sirsa districts Sirsa and Hissar and in the south, Faridabad, Palwal and Mewat districts. Moderate water levels (5-10m) occur in 18% wells covering 39% of area of the state covering parts of Sonipat, Jind, Jhajjar, Rohtak, Rewari, Bhiwani, Hissar, Fatehabad, Sirsa, Mohindergarh, Mewat and Palwal districts.

Moderately deep water levels of 10-20m are observed in nearly 25% wells and 34% of the area falling in Karnal, Jind, Fatehabad, Sirsa Hissar, Bhiwani, Charkhi Dadri, Mahendragarh and Rewari districts. Deep water levels of 20-40m have been registered in 32% of wells and about 14% area reported from, Karnal, Kurukshetra, Kaithal, Fatehabad, Sirsa, Bhiwani districts. Very Deep water levels (>40m) also occur in less than 13% of the wells and 2% area falling in Bhiwani and Mahendragarh districts & isolated patches in Kurukshetra, of Fatehabad and Sirsa districts.

| Depth to water level range | Wells monitored | | Area covered | |
|----------------------------|-----------------|------|--------------|------|
| | No. | %age | Sq. Km. | %age |
| 0-2 | 6 | 3 | 99 | 0 |
| 2-5 | 26 | 11 | 4254 | 10 |
| 5-10 | 42 | 18 | 17403 | 39 |
| 10-20 | 59 | 25 | 15183 | 34 |
| 20-40 | 76 | 32 | 6384 | 14 |
| >40 | 31 | 13 | 891 | 2 |

FIG. 4

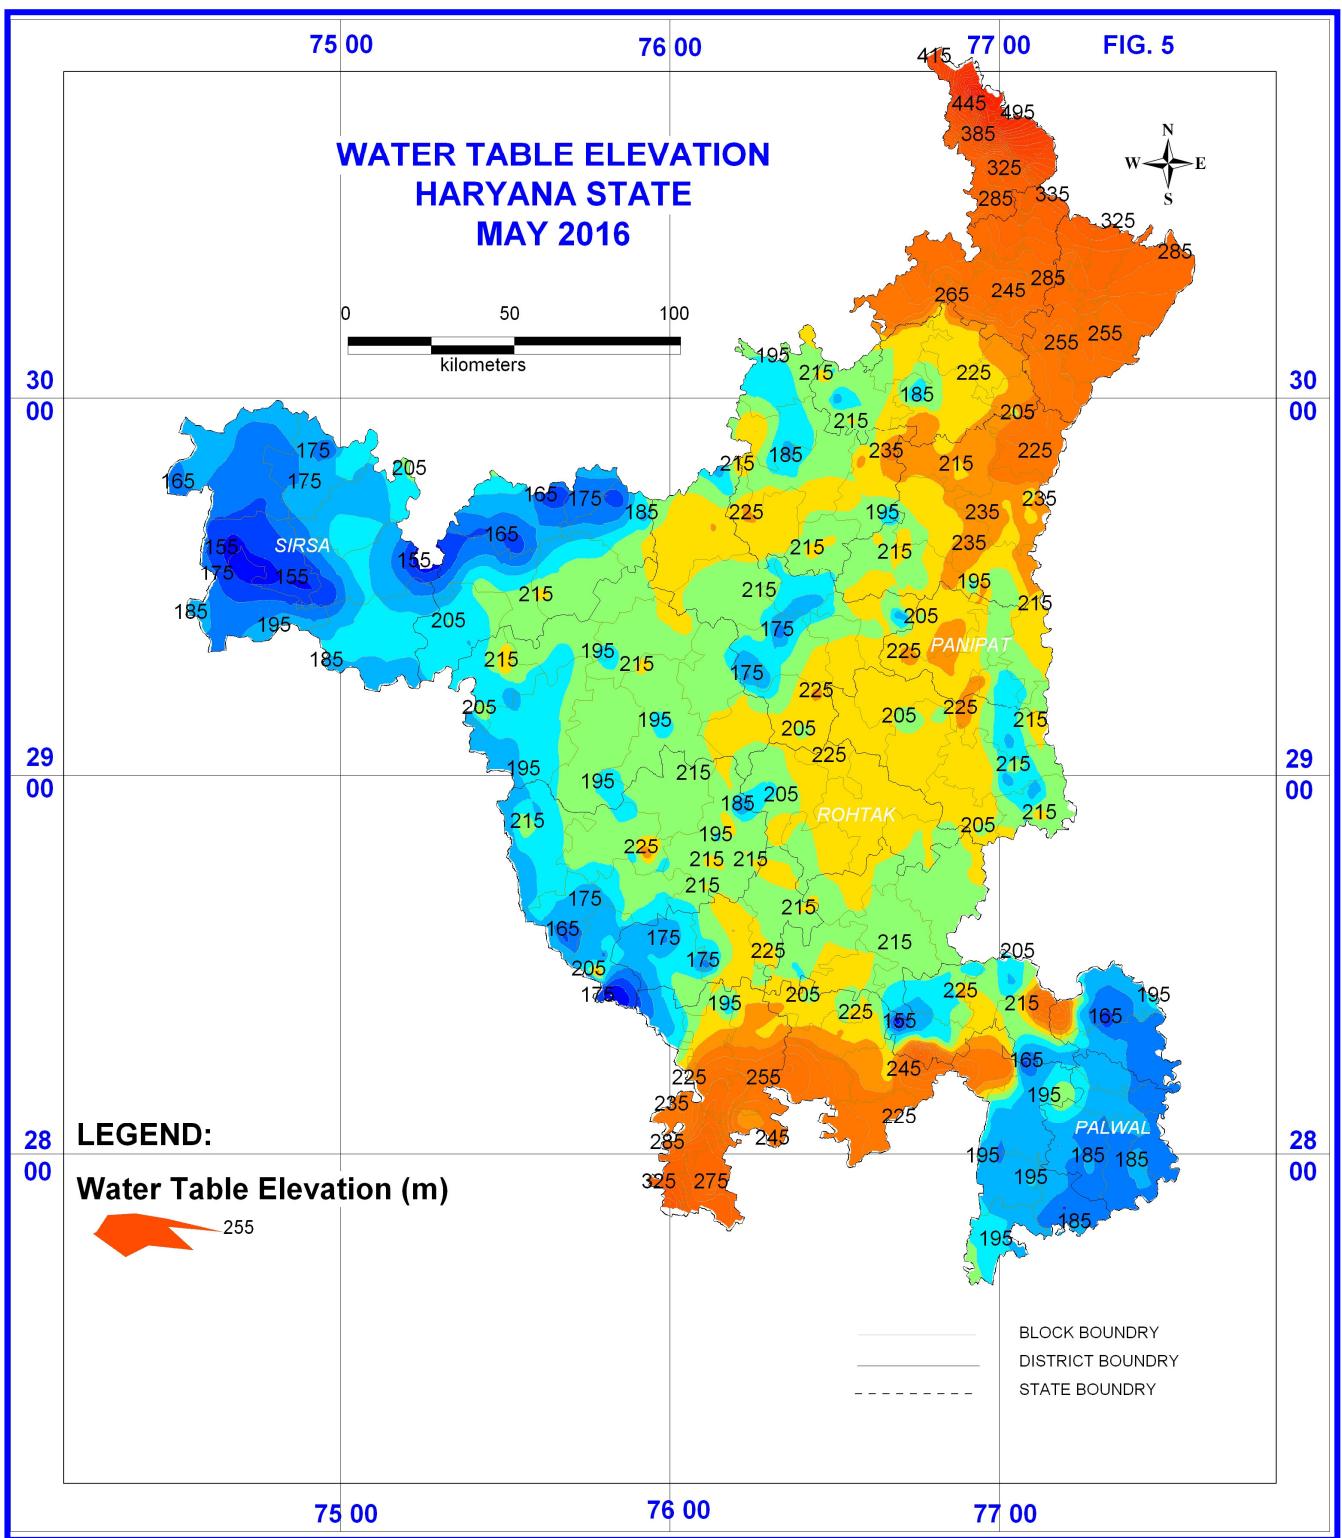

3.2 GROUND WATER ELEVATION AND FLOW DIRECTIONS

Ground water flows from areas of high hydraulic head (high water-level elevation) to areas of low head (low water level elevation). Because hydraulic heads vary laterally and vertically in a ground-water system, ground-water movements generally have a vertical as well as a horizontal component. Contour maps of heads in aquifers are constructed to determine the horizontal direction of flow. A contour map of the water table represents the elevation of the top of the saturated part of the uppermost unconfined aquifer.

The horizontal direction of ground-water flow is generally perpendicular to the contour lines and water flows down the slope of the contours in a manner analogous to the flow of water down the slope of the land surface. Water-table maps are prepared from water levels measured in ground water observation wells the elevation of the water-table surface.

3.2.1 MAY 2016

The water table elevation map helps in determining the hydraulic gradient and ground water flow direction. The water table elevation contours in the area follows the topography and it varies from 556.98m AMSL in northeastern part in Panchkula district to 150.36m AMSL in southeastern part in Palwal district. The general ground water flow is from Northeast to Southwest direction. However, in the southern part it is towards central part thus creating a closed basin causing water logging conditions in the central Haryana in parts of Rohtak, Bhiwani and Hissar districts. The hydraulic gradient is steep in the northern, eastern and southwestern parts of the State, whereas, it is gentle in the southeastern part. The major part of the state has moderate water table gradients. The sluggish ground water movement (0.07 m/km) observed in central part results in water logging on regional scale as depicted in (Fig.5).

3.3 SEASONAL FLUCTUATIONS

The water level data of current month or monitoring period is compared with water level data of monitoring period and seasonal water level fluctuation is determined.

3.3.1 JANUARY 2016 - MAY 2016

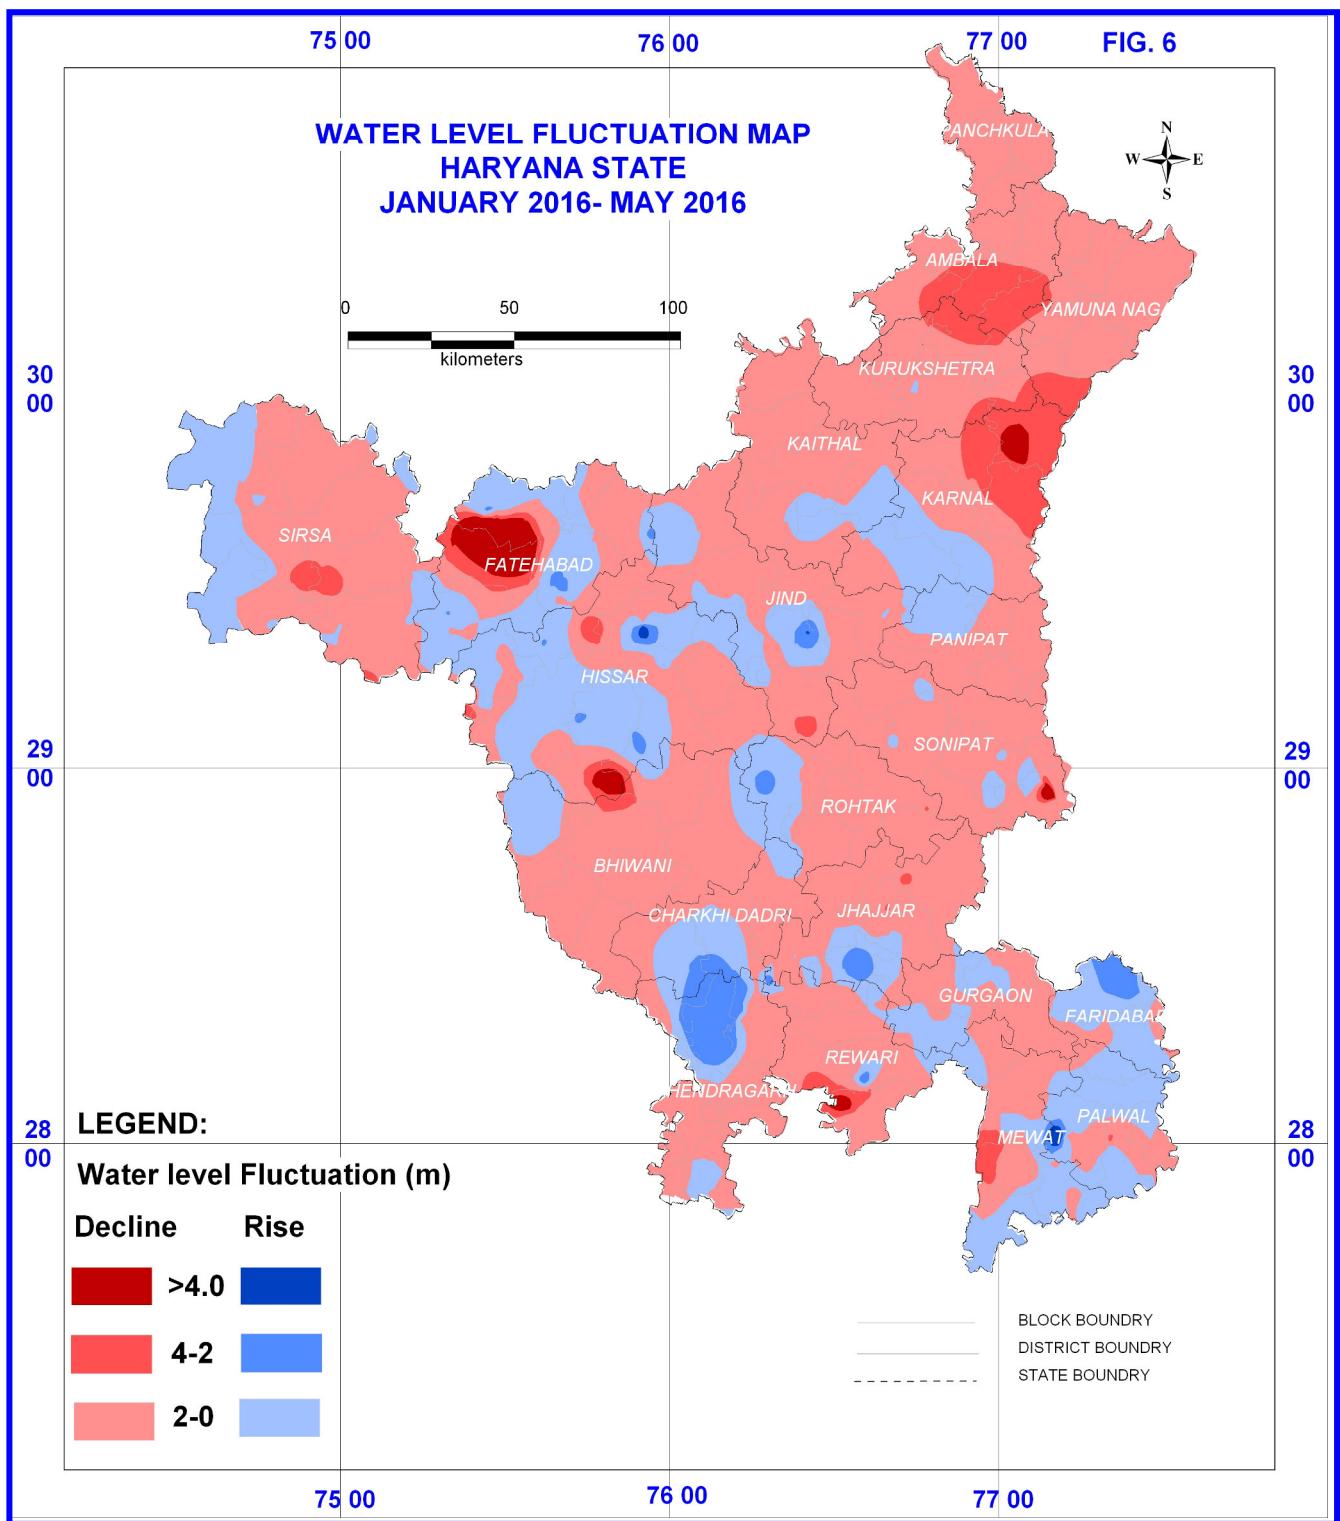

The behavioral pattern of seasonal water level fluctuation is discussed below along with map (Fig. 6) and data are presented in Annexure-2 (Col-4).

The interpretation of seasonal fluctuations indicates a general decline in 70% of the wells monitored covering an area of 74% of the State. The water level decline in the range of 0-2m has been observed in 63% wells and 66% of the area in all districts. Water level decline in range of 2-4m has been observed in 5% wells and 6% of the area covering parts of Karnal and Kurukshetra along with isolated patches in Hissar, Mahendragarh, Jind, Palwal and Rewari districts. Water level decline >4m is recorded in 2% wells and 2% of the area in Karnal districts.

The water level Rise has been observed in 30% of the wells and 26% of the area depict Rise in water levels. The water level Rise of 0-2m has been observed in 25% of wells and 23% of area falling in Sirsa, Hissar, Bhiwani, Fatehabad, Jind, Kaithal, Jhajjar, Rohtak and isolated patches in Sonipat, Panipat districts. The water level Rise of 2-4m has been observed in 4% of wells and 1% of area of the state. Water level rise >4m is recorded in 1% wells and 1% of the area in the state.

| Water Level Fluctuation Range | | Wells Monitored | | Area Covered | |
|-------------------------------|------|-----------------|------|--------------|------|
| | | No. | %Age | Sq. Km. | %Age |
| Decline | 0-2 | 263 | 63 | 29271 | 66 |
| | 2-4 | 21 | 5 | 2768 | 6 |
| | >4.0 | 7 | 2 | 797 | 2 |
| Rise | 0-2 | 105 | 25 | 10390 | 23 |
| | 2-4 | 17 | 4 | 611 | 1 |
| | >4.0 | 3 | 1 | 377 | 1 |

FIG. 6

3.3.2 MAY 2016 - AUGUST 2016

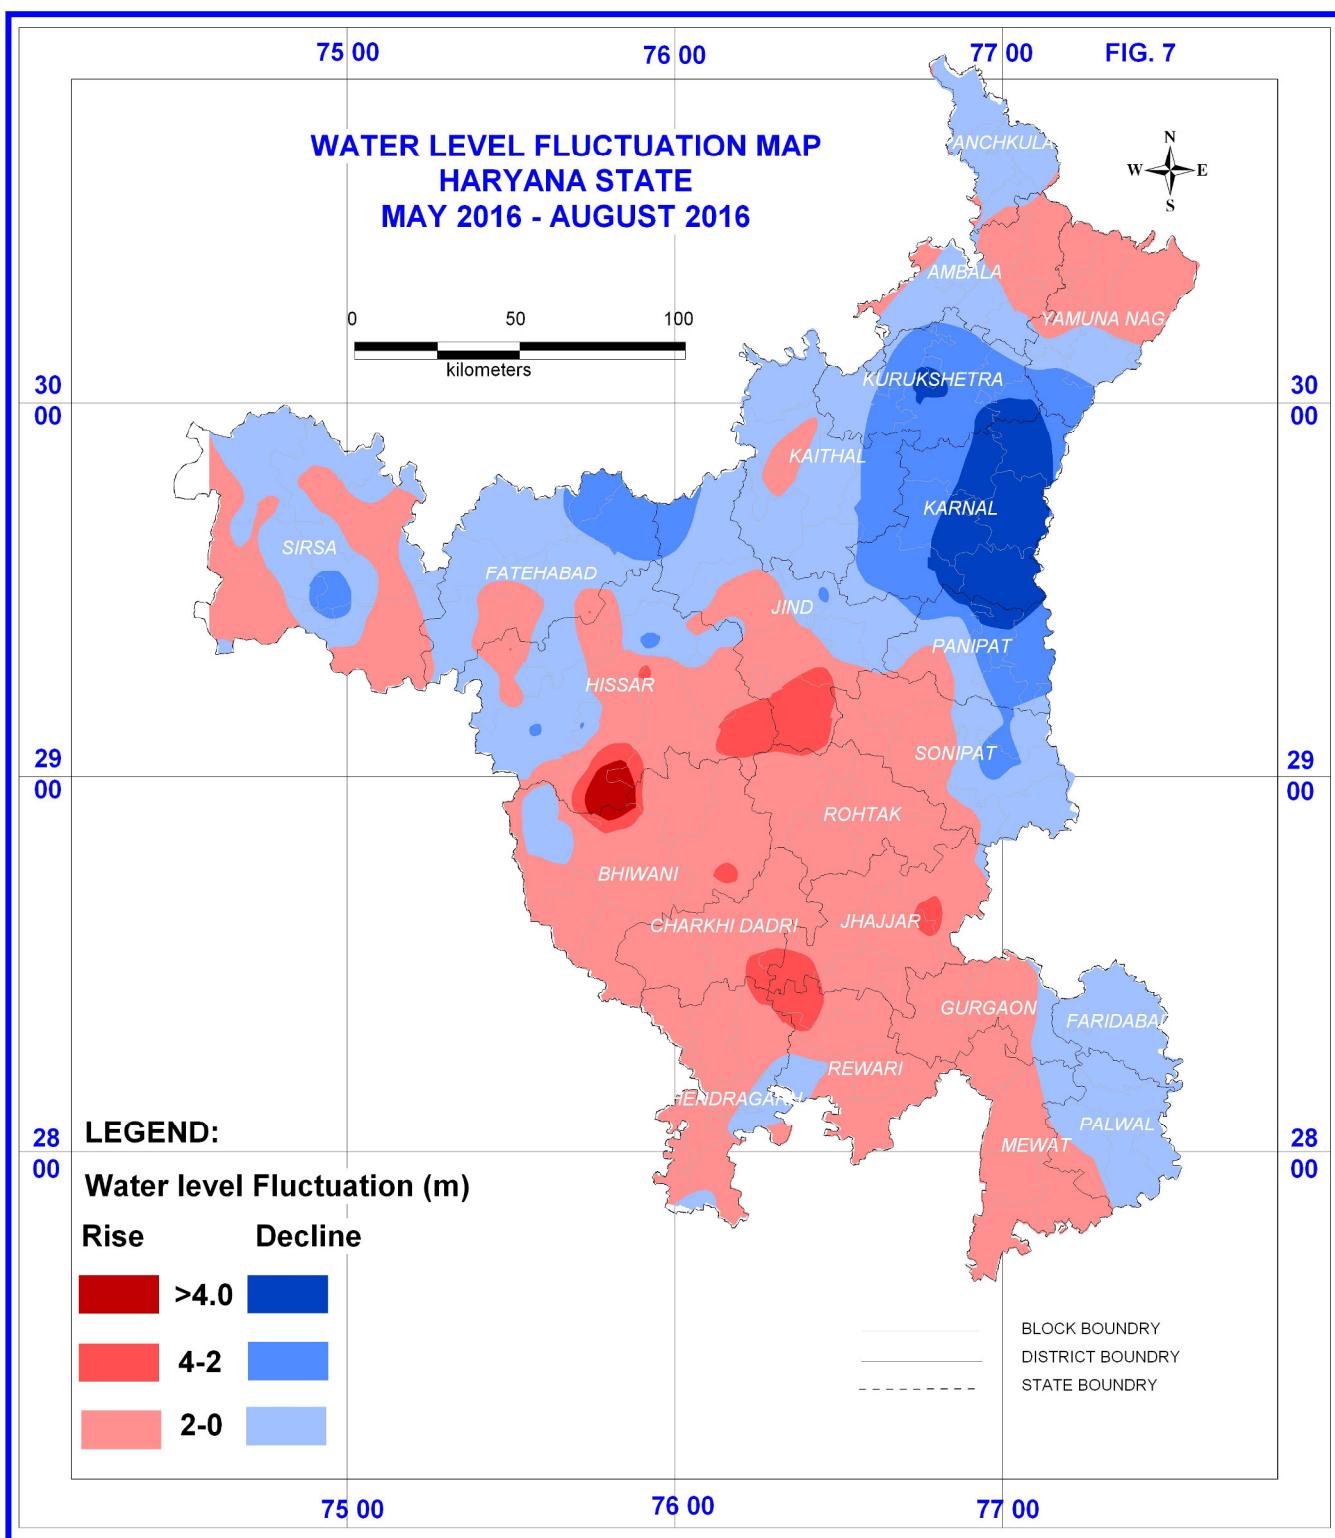

The behavioral pattern of seasonal fluctuations is discussed below along with seasonal water level fluctuation map (Fig. 7).and data are presented in Annexure-2 (Col-5).

The interpretation of seasonal fluctuations indicates a general decline in 38% of the wells monitored covering an area of 48% of the State. The water level decline in the range of 0-2m has been observed in 29% wells and 34% of the area in Panchkula, Ambala, Yamunanagar, Kurukshetra, Karnal, Kaithal, Jind, Fatehabad, Sirsa, Hissar, Palwal and Faridabad districts. Water level decline in range of 2-4m has been observed in 6% wells and 10% of the area covering parts of Yamunanagar, Kurukshetra, Kaithal, Karnal, Panipat, Sonipat and Sirsa districts. Water level decline >4m is recorded in 3% wells and 4% of the area in Karnal and Kurukshetra districts.

The water level Rise has been observed in 62% of the wells and 52% of the area of the state. The water level Rise of 0-2m has been observed in 52% of wells and 48% of area rising in Ambala, Yamunanagar, Mewat, Gurgaon, Mahendragarh, Bhiwani, Sirsa, Fatehabad, Jind, Jhajjar, Rohtak and Sonipat districts. The water level Rise of 2-4m has been observed in 9% of wells and 3% of area rising in Panchkula and Ambala districts. The water level Rise of >4m is recorded in 1% wells and <1% of the area.

| Water Level Fluctuation Range | | Wells Monitored | | Area Covered | |
|-------------------------------|------|-----------------|------|--------------|------|
| | | No. | %Age | Sq. Km. | %Age |
| Decline | 0-2 | 35 | 29 | 15244 | 34 |
| | 2-4 | 7 | 6 | 4247 | 10 |
| | >4.0 | 4 | 3 | 1936 | 4 |
| Rise | 0-2 | 63 | 52 | 21178 | 48 |
| | 2-4 | 11 | 9 | 1399 | 3 |
| | >4.0 | 1 | 1 | 210 | 0 |

FIG. 7

3.3.3 MAY 2016 - NOVEMBER 2016

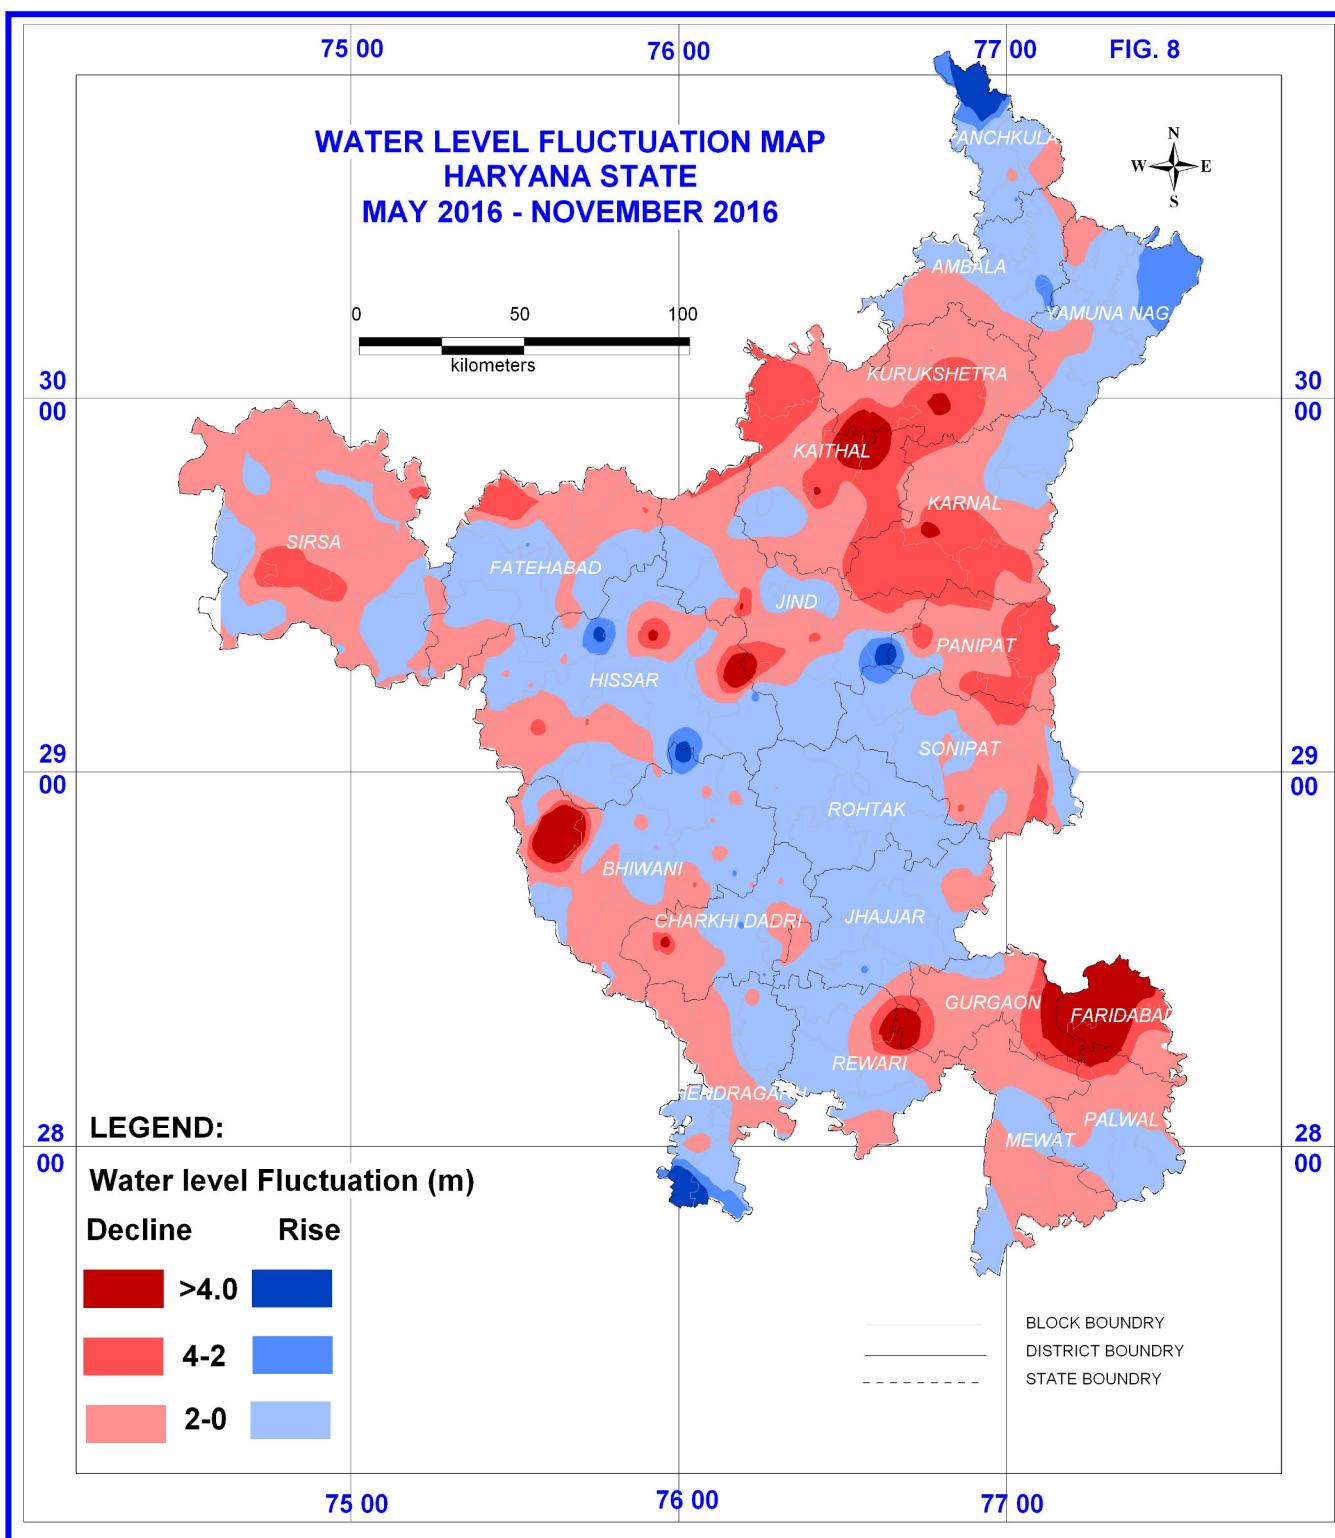

The behavioral pattern of seasonal fluctuations is discussed below along with seasonal water level fluctuation map (Fig. 8).and data are presented in Annexure-2 (Col-6).

The interpretation of seasonal fluctuations indicates a general decline in 45% of the wells monitored covering an area of 54% of the State. The water level decline in the range of 0-2m has been observed in 35% wells and 39% of the area in all districts. Water level decline in range of 2-4m has been observed in 8% wells and 11% of the area covering parts of Kaithal, Karnal, Kurukshetra, Jind, Panipat, Sonipat Sirsa, Bhiwani, Rewari, Gurgaon and Faridabad districts. Water level decline more than 4m is recorded in 3% wells and 3% of the area in isolated patches.

The water level rise has been observed in 55% of the wells and 46% of the area depict Rise in water levels. The water level Rise of 0-2m has been observed in 50% of wells and 44% of area rising Panchkula, Ambala, Yamuna Nagar, Karnal, Jind, Fatehabad, Sirsa, Hissar, Bhiwani, Charkhi Dadri, Rewari, Jhajjar, Rohtak, Sonipat and Palwal districts. The water level Rise of 2-4m has been observed in 3% of wells and 2% of area. Water level decline more than 4m is recorded in 2% wells and 1% of the area in isolated patches.

| water level fluctuation range | | Wells monitored | | Area covered | |
|-------------------------------|------|-----------------|------|--------------|------|
| | | No. | %age | Sq. Km. | %age |
| Decline | 0-2 | 159 | 35 | 17401 | 39 |
| | 2-4 | 36 | 8 | 4824 | 11 |
| | >4.0 | 12 | 3 | 1446 | 3 |
| Rise | 0-2 | 229 | 50 | 19328 | 44 |
| | 2-4 | 14 | 3 | 896 | 2 |
| | >4.0 | 8 | 2 | 319 | 1 |

FIG. 8

3.3.4 MAY 2016 – JANUARY 2017

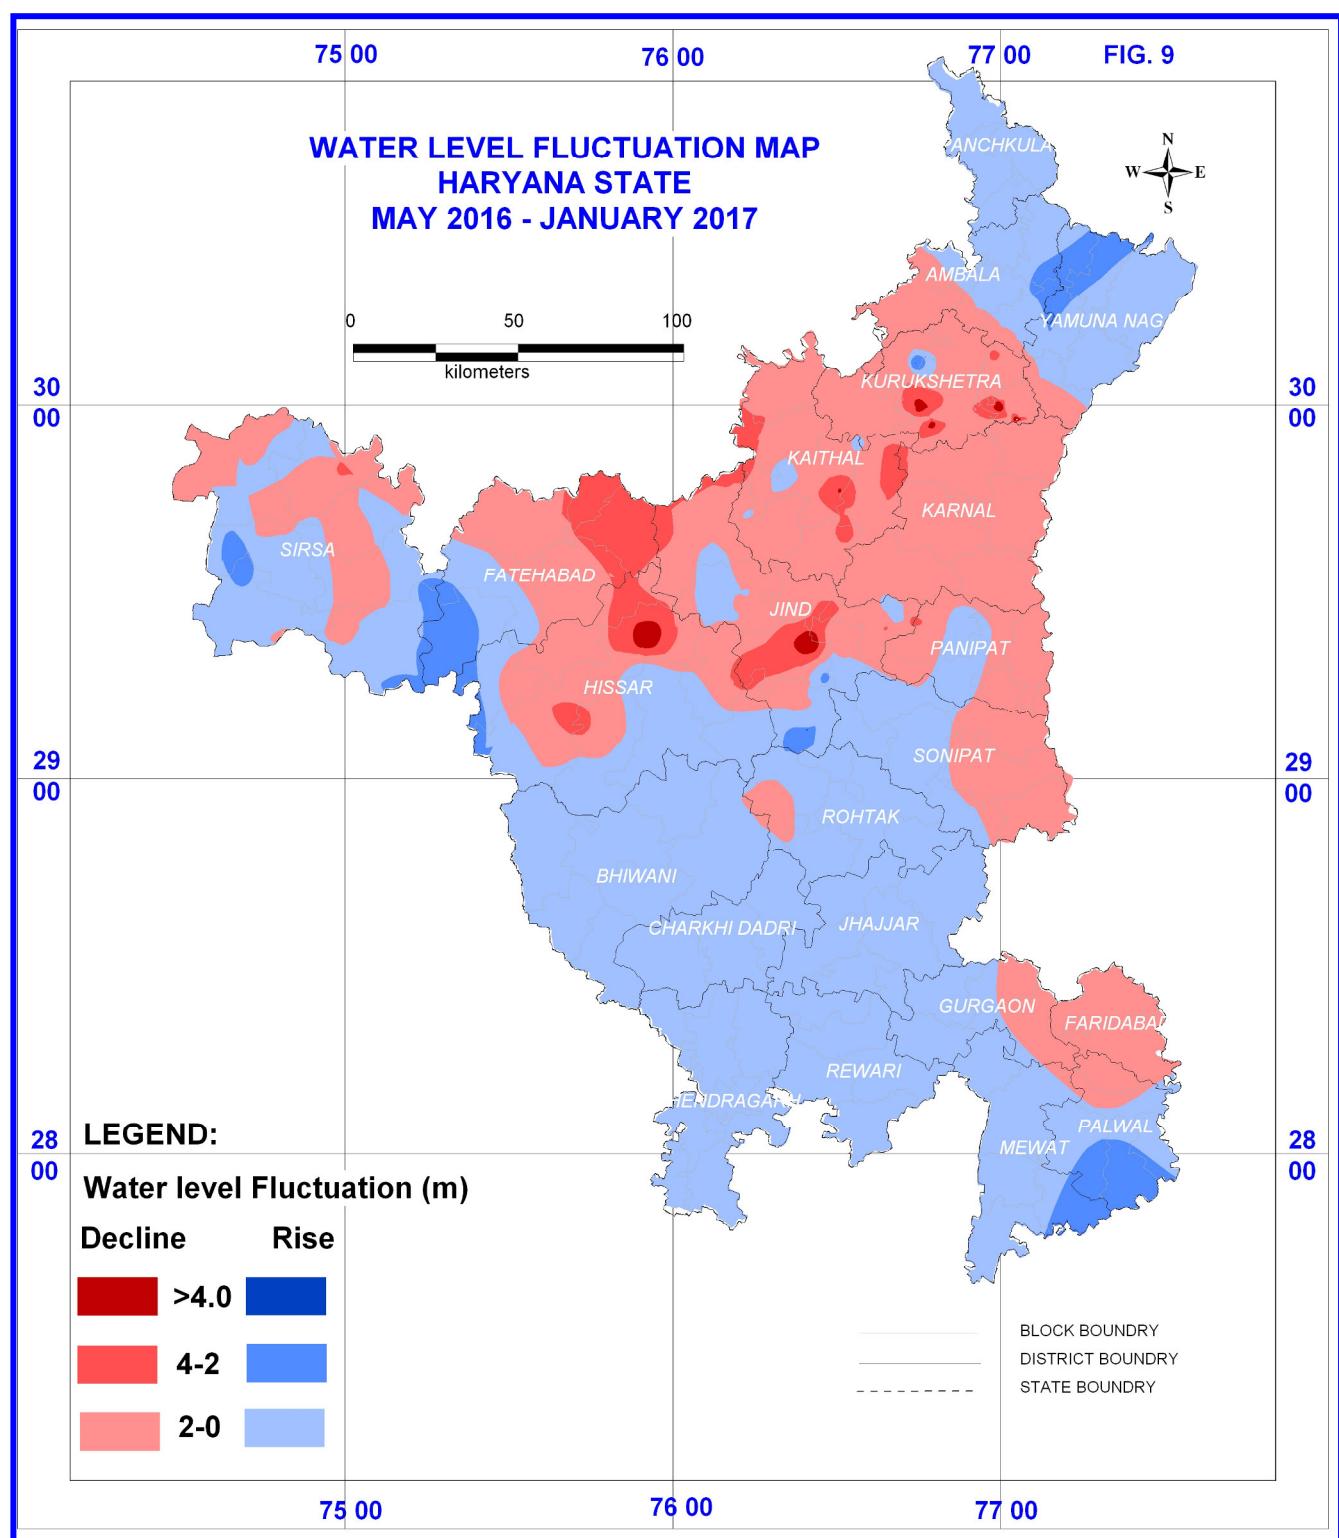

The behavioral pattern of seasonal fluctuations is discussed below along with seasonal water level fluctuation map (Fig. 9).and data are presented in Annexure-2 (Col-7).

The interpretation of seasonal fluctuations indicates a general decline in 70% of the wells monitored covering an area of 42% of the State. The water level decline in the range of 0-2m has been observed in 58% wells and 37% of the area in Ambala, Kurukshetra, Kaithal, Karnal, Panipat, Sonipat, Gurgaon, Faridabad, Jind, Fatehabad, Sirsa and Hissar districts. Water level decline in range of 2-4m has been observed in 8% wells and 4% of the area. Water level decline more than 4m is recorded in 3% wells and <1% of the area in isolated patches.

The water level Rise has been observed in 30% of the wells and 58% of the area. The water level rise has been observed in all south and south western districts in state. The water level Rise of 0-2m has been observed in 26% of wells and 54% of area. The water level Rise of 2-4m has been observed in 3% of wells and 4% of area. Water level rise more than 4m is recorded in 1% wells and <1% of the area in isolated patches.

| Water Level Fluctuation Range | | Wells Monitored | | Area Covered | |
|-------------------------------|------|-----------------|------|--------------|------|
| | | No. | %Age | Sq. Km. | %Age |
| Decline | 0-2 | 122 | 58 | 16258 | 37 |
| | 2-4 | 17 | 8 | 1956 | 4 |
| | >4.0 | 7 | 3 | 200 | 0 |
| Rise | 0-2 | 54 | 26 | 23941 | 54 |

| | >4.0 | 3 | 1 | 120 | 0 |

FIG. 9

3.4 ANNUAL WATER LEVEL FLUCTUATIONS

The water level data of current season (i.e. May 2016) when compared with water level data of corresponding period of previous year (i.e. May 2016) annual water level fluctuations is determined.

3.4.1 MAY 2015 – MAY 2016

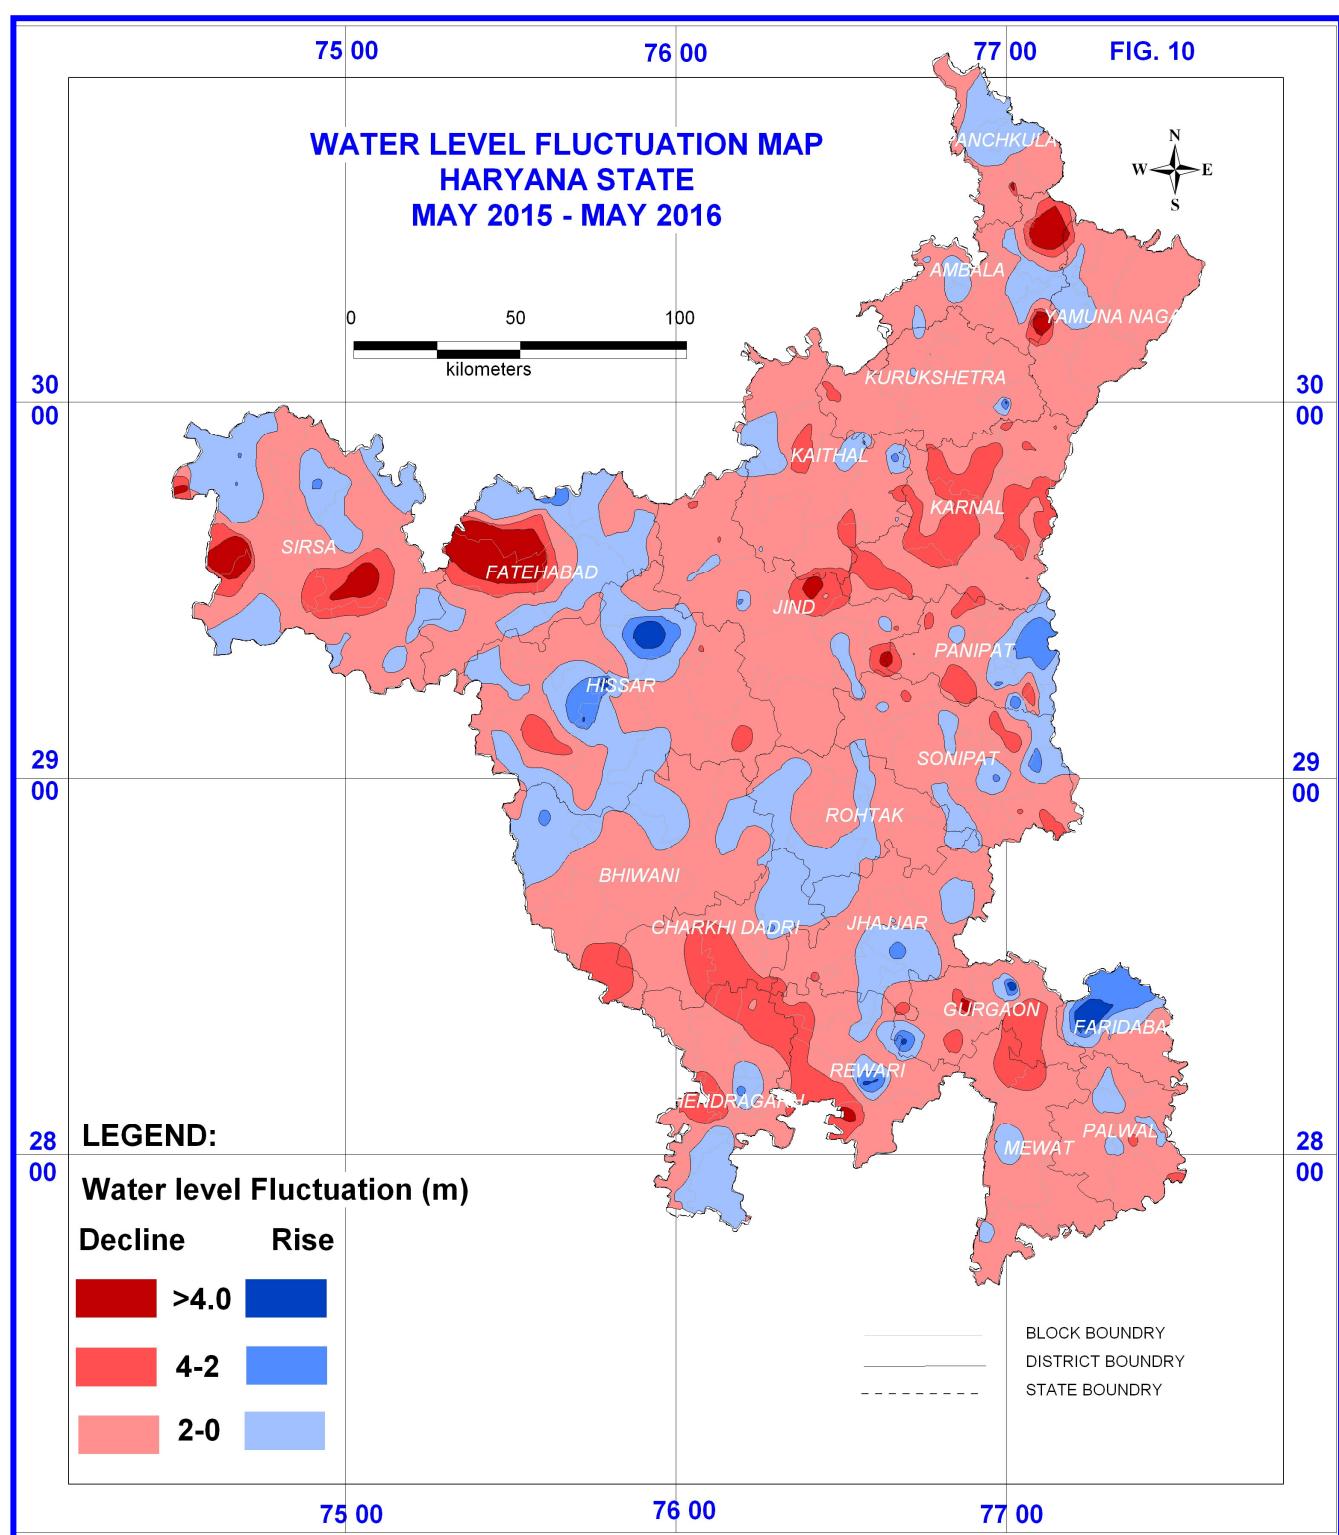

The behavioral pattern of annual fluctuations is discussed along with (Fig. 10) and data are presented in Annexure-3 (Col-4).

The interpretations of annual water level fluctuation depicts water level decline in about 79% of wells monitored and 77% of the area in all districts of the state. Water level Decline (0-2m) has been recorded in 66% of wells and 65% of area. Water level decline (2-4m) has recorded in 11% of wells and 9% of area. Water level decline of more than 4m is observed in 2% of wells and 2% of area.

Water level rise has recorded in 21% of the wells and 23% of the area. Water level Rise (0-2m) has been recorded in 17% of the wells and 21% area covering central parts of the state. Water level Rise of 2-4m has been observed in small patches in 3% of wells and 2% of area. Water level Rise of more than 4m observed in 1% of wells and <1% of area.

| Water Level Fluctuation Range | | Wells Monitored | | Area Covered | |
|-------------------------------|------|-----------------|------|--------------|------|
| | | No. | %Age | Sq. Km. | %Age |
| Decline | 0-2 | 469 | 66 | 28898 | 65 |
| | 2-4 | 79 | 11 | 4174 | 9 |
| | >4.0 | 14 | 2 | 856 | 2 |
| Rise | 0-2 | 124 | 17 | 9305 | 21 |
| | 2-4 | 19 | 3 | 798 | 2 |
| | >4.0 | 9 | 1 | 183 | 0 |

FIG. 10

3.4.2 August 2015 – August 2016

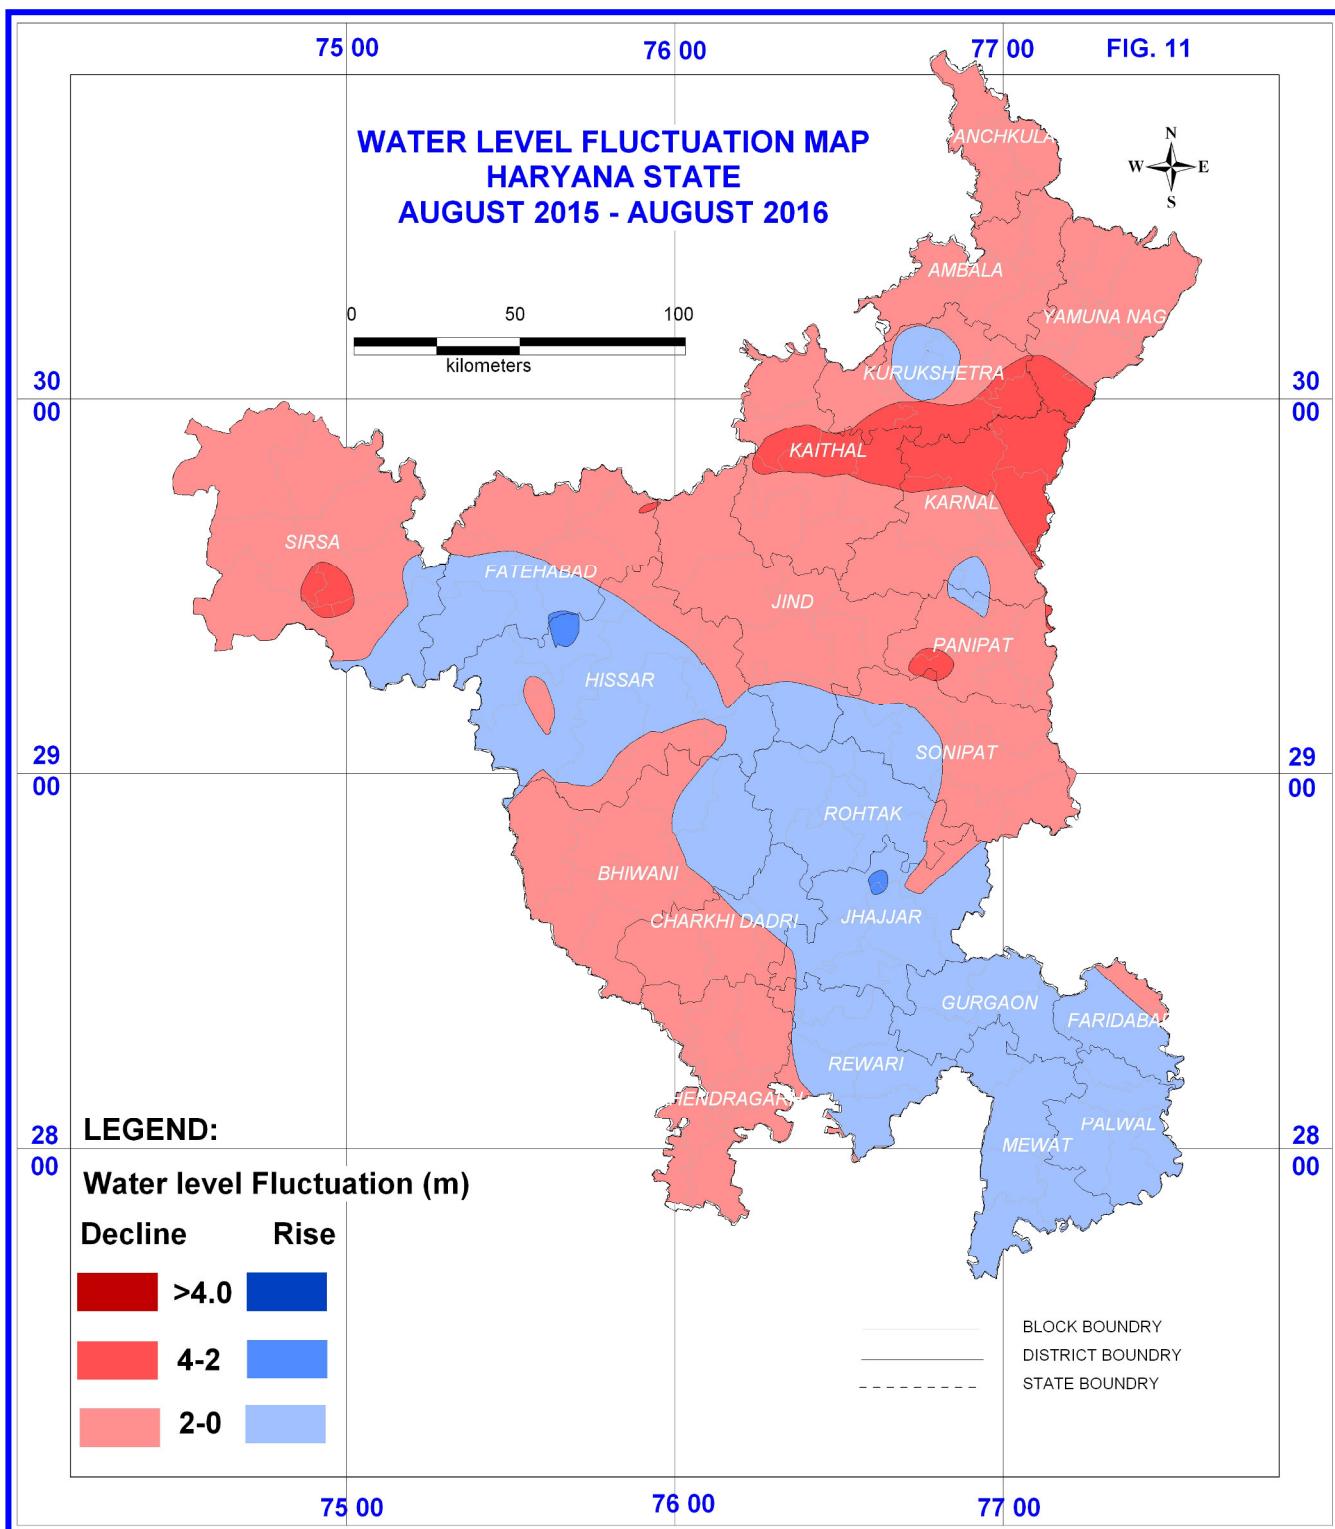

The behavioral pattern of annual fluctuations is discussed along with (Fig.11) below and data are presented in Annexure-3 (Col-5).

The interpretations of annual water level fluctuations depicts water level decline in about 63% of wells monitored and 61% of the area in Panchkula, Ambala, Yamunanagar, Kurukshetra, Karnal, Kaithal, Jind, Panipat, Sonipat, Fatehabad, Sirsa, Bhiwani, Charkhi, Dadri and Mahendragarh districts of the state. Water level decline (0-2m) has been recorded in 52% of wells and 54% of area. Water level Decline (2-4m) has recorded in 12% of wells and 7% of area. Water level decline of more than 4m was not observed during the period.

The water level rise has been recorded remaining 37% of the wells and 39% of the area Fatehabad, Hissar, Bhiwani, Rohtak, Jhajjar, Gurgaon, Rewari, Mewat, Palwal and Faridabad districts. Water level Rise (0-2m) has been recorded in 33% of the wells and 39% area. Water level Rise of 2-4m has been observed in small patches in 4% of wells and 1% of area of the state in parts of Bhiwani, Gurgaon, Rewari, Jhajjar and Ambala districts. Water level rise of more than 4m was not observed during the period.

| Water Level Fluctuation Range | | Wells Monitored | | Area Covered | |
|-------------------------------|------|-----------------|------|--------------|------|
| | | No. | %Age | Sq. Km. | %Age |
| Decline | 0-2 | 27 | 52 | 23799 | 54 |
| | 2-4 | 6 | 12 | 2990 | 7 |
| | >4.0 | 0 | 0 | 0 | 0 |
| Rise | 0-2 | 17 | 33 | 17201 | 39 |
| | 2-4 | 2 | 4 | 224 | 1 |
| | >4.0 | 0 | 0 | 0 | 0 |

FIG. 11

3.4.3 NOVEMBER 2015 – NOVEMBER 2016

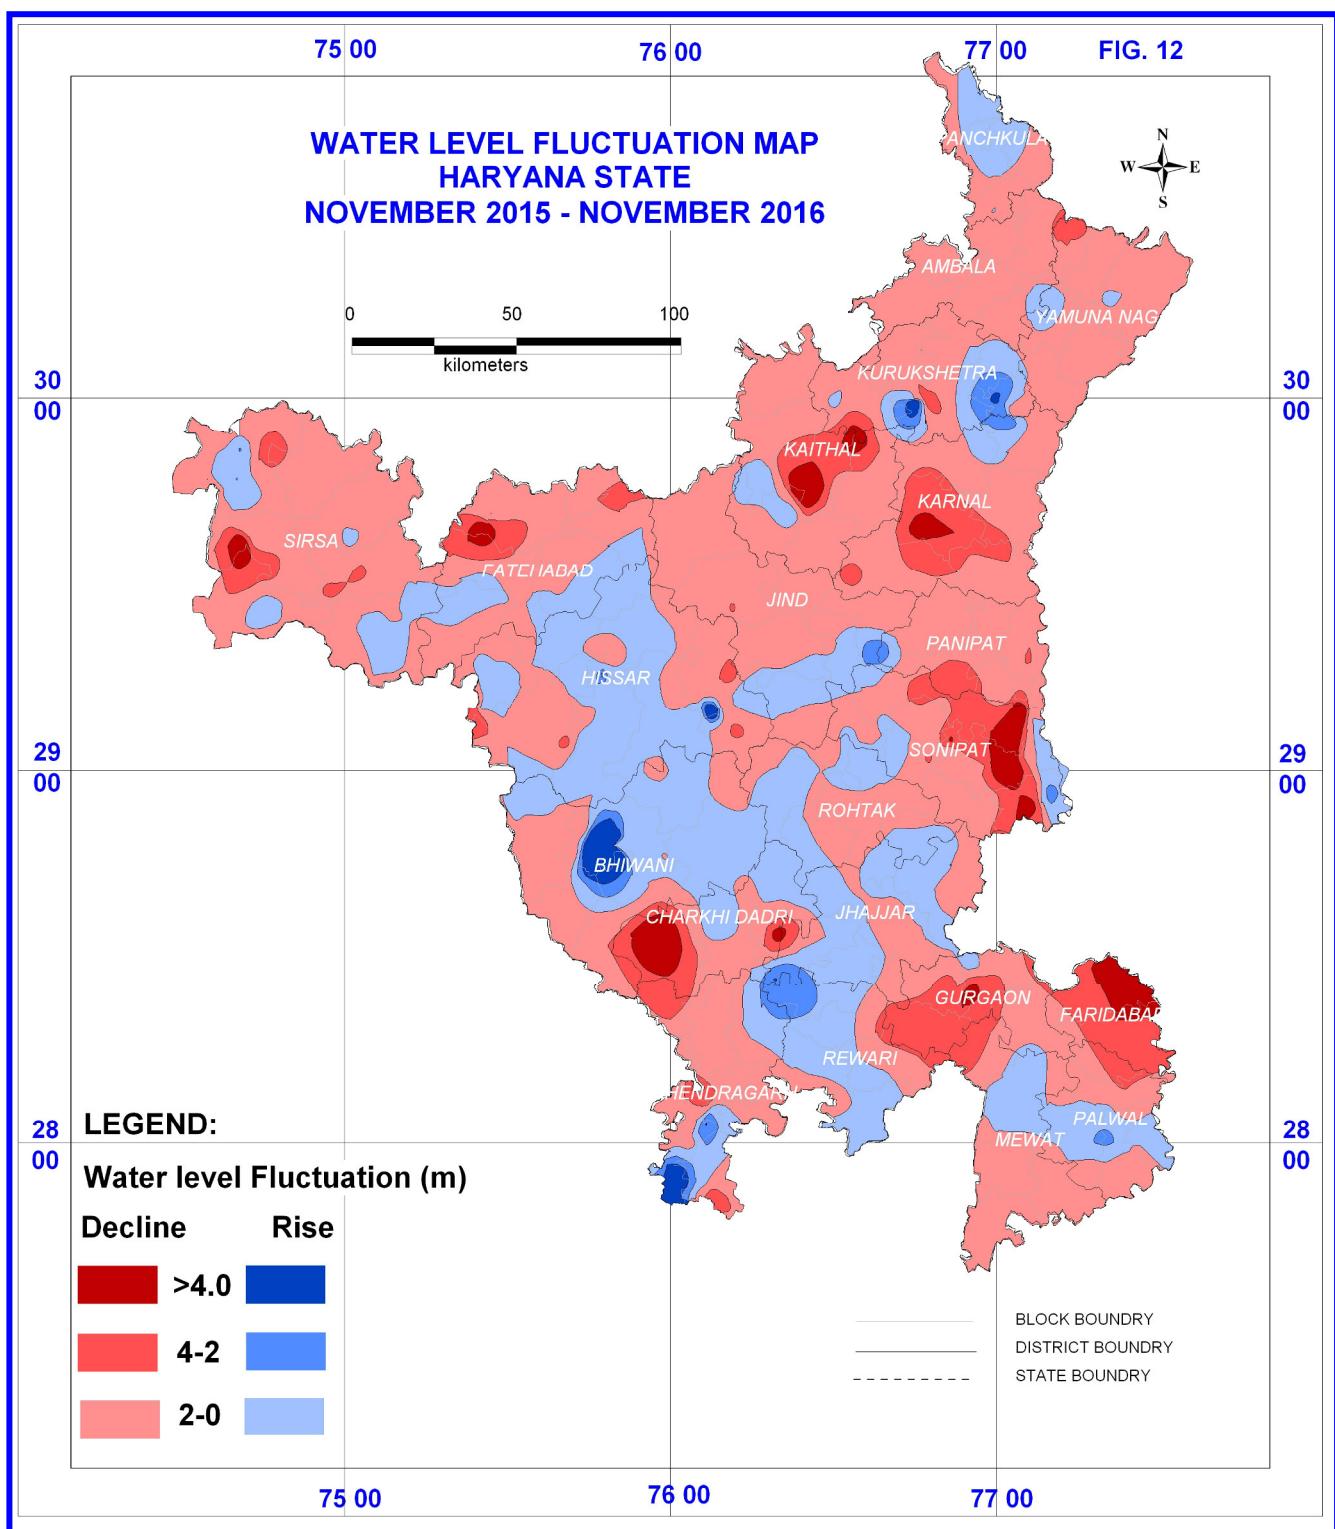

The behavioral pattern of annual fluctuations is discussed along with (Fig.12) below and data are presented in Annexure-3 (Col-6).

The interpretations of annual water level depicts water level Decline in about 64% of wells monitored and 71% of the area covering all districts in the state. Water level decline (0-2m) has been recorded in 51% of wells and 59% of area in all districts in the state. Water level Decline (2-4m) has recorded in 9% of wells and 10% of area. Water level Decline of >4m recorded in 4% of wells and 3% of area of the state.

Water level Rise recorded in 36% of the wells and 29% of the area. Water level Rise (0-2m) has been recorded in 32% of the wells and 27% area covering parts of Fatehabad, Sirsa, Hissar, Bhiwani, Rohtak, Jhajjar, Rewari, and Palwal districts. Water level Rise of 2-4m has been observed in small patches in 2% of wells and 2% of area and water level Rise of >4m recorded in 3% of wells and 1% of area of the state.

| Water Level Fluctuation Range | | Wells Monitored | | Area Covered | |
|-------------------------------|------|-----------------|------|--------------|------|
| | | No. | %Age | Sq. Km. | %Age |
| Decline | 0-2 | 181 | 51 | 25925 | 59 |
| | 2-4 | 34 | 9 | 4397 | 10 |
| | >4.0 | 14 | 4 | 1127 | 3 |
| Rise | 0-2 | 114 | 32 | 11729 | 27 |

| | >4.0 | 9 | 3 | 238 | 1 |

FIG. 12

3.4.4 JANUARY 2016 – JANUARY 2017

The behavioral pattern of annual fluctuations is discussed along with (Fig. 13) below and data are presented in Annexure-3 (Col-7).

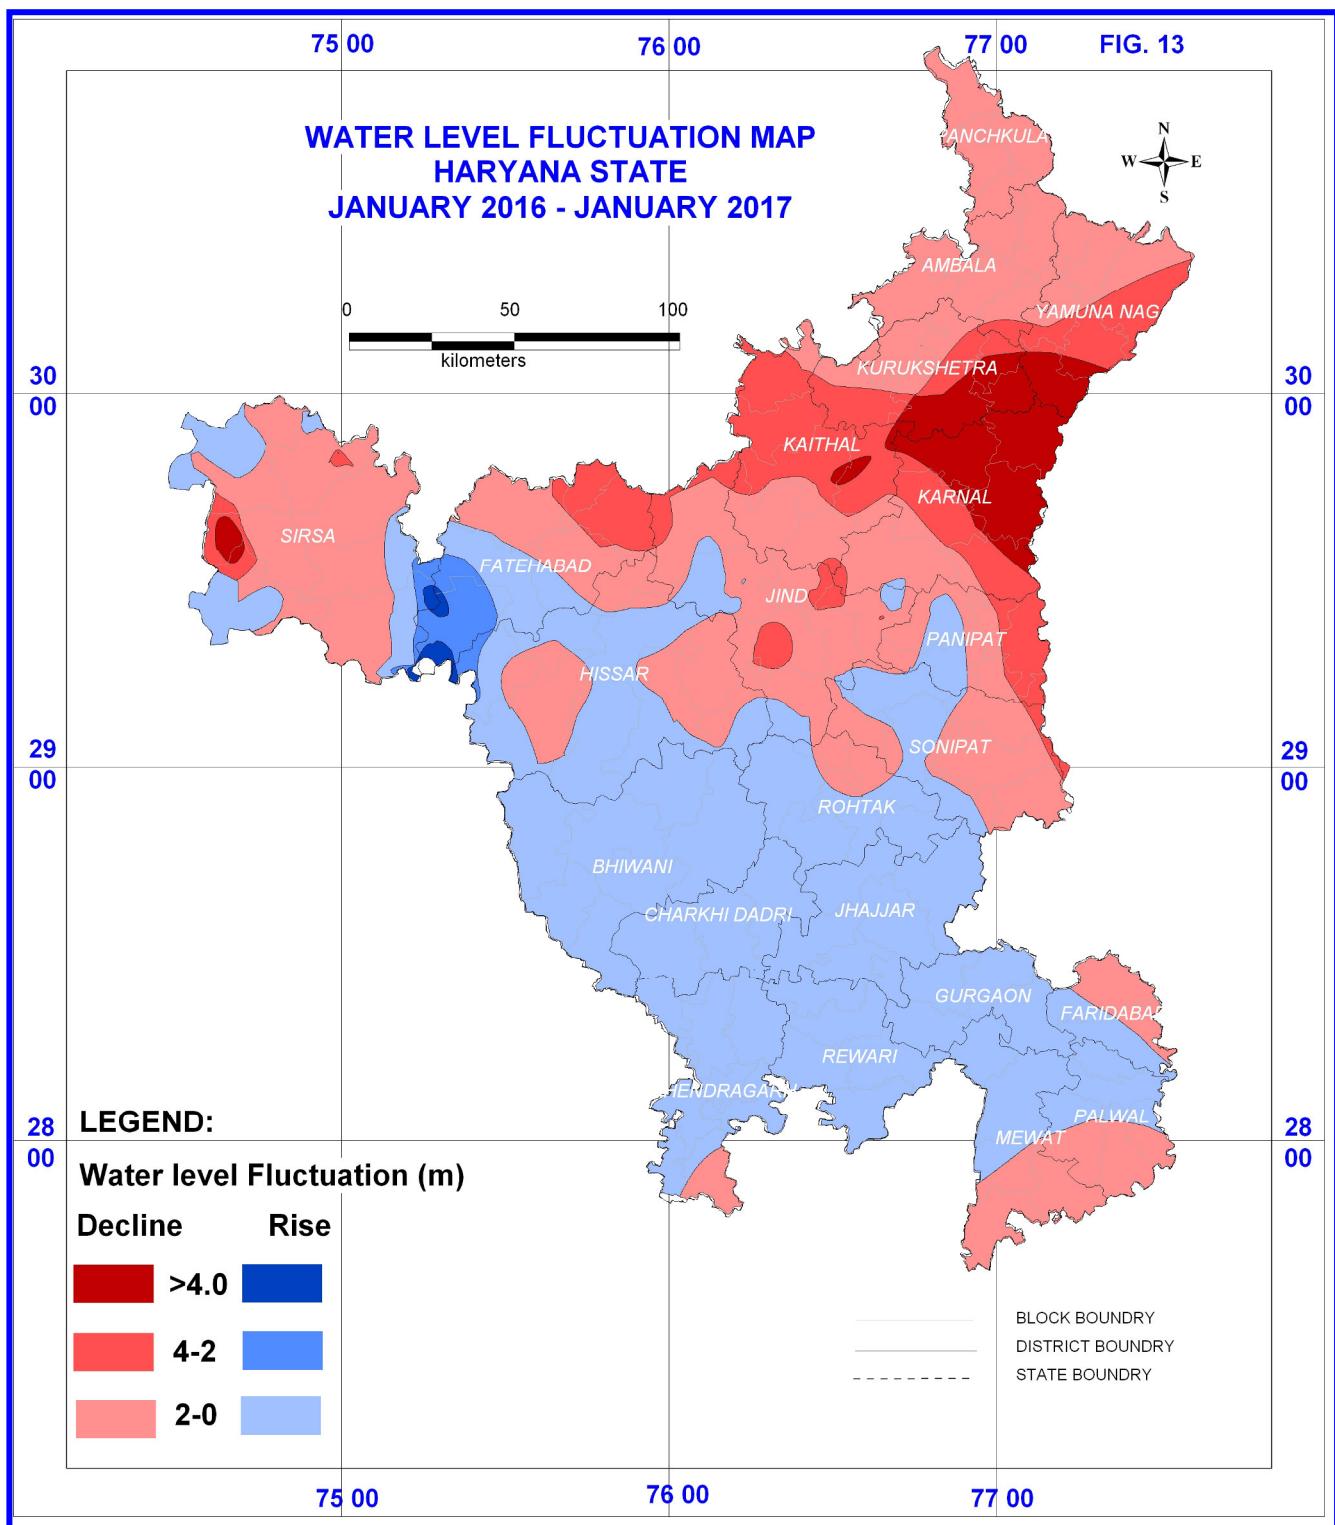

The interpretations of annual water level fluctuations depicts water level decline in about 67% of wells monitored and 54% of the area in Panchkula, Ambala, Yamunanagar, Kurukshetra, Kaithal, Karnal, Panipat, Sonipat Jind, Fatehabad, Hissar, Mewat, Palwal and Faridabad districts of the state.

Water level decline (0-2m) has been recorded in 54% of wells and 38% of area. Water level decline (2-4m) has recorded in 8% of wells and 11% of area. Water level decline of more than 4m was observed in 5% of wells and 5% of area of the state.

Water level rise has been recorded in 33% of the wells and 46% of the area Sirsa, Fatehabad, Hissar, Bhiwani, Charkhi Dadri, Mahendragarh Jhajjar, Rohtak, Rewari, Gurgaon, Mewat, Palwal, and Faridabad districts of the state. Water level Rise (0-2m) has been recorded in 30% of the wells and 44% area. Water level Rise of 2-4m has been observed in small patches in 1% of wells and 1% of area. Water level rise of more than 4m was observed in 2% of wells and <1% of area of the state.

| Water Level Fluctuation Range | | Wells Monitored | | Area Covered | |
|-------------------------------|------|-----------------|------|--------------|------|
| | | No. | %Age | Sq. Km. | %Age |
| Decline | 0-2 | 53 | 54 | 16729 | 38 |

FIG. 13

3.5 DECADAL MEAN WATER LEVEL FLUCTUATION

To determine the changes in water level behaviour since last one decade have been observed using decadal mean data. Mean of Water level data of all ground water observation wells for past one decade, (May 2006:2015) are computed and compared with the water level data of May 2016.

3.5.1 MAY (2006:2015) & MAY 2016

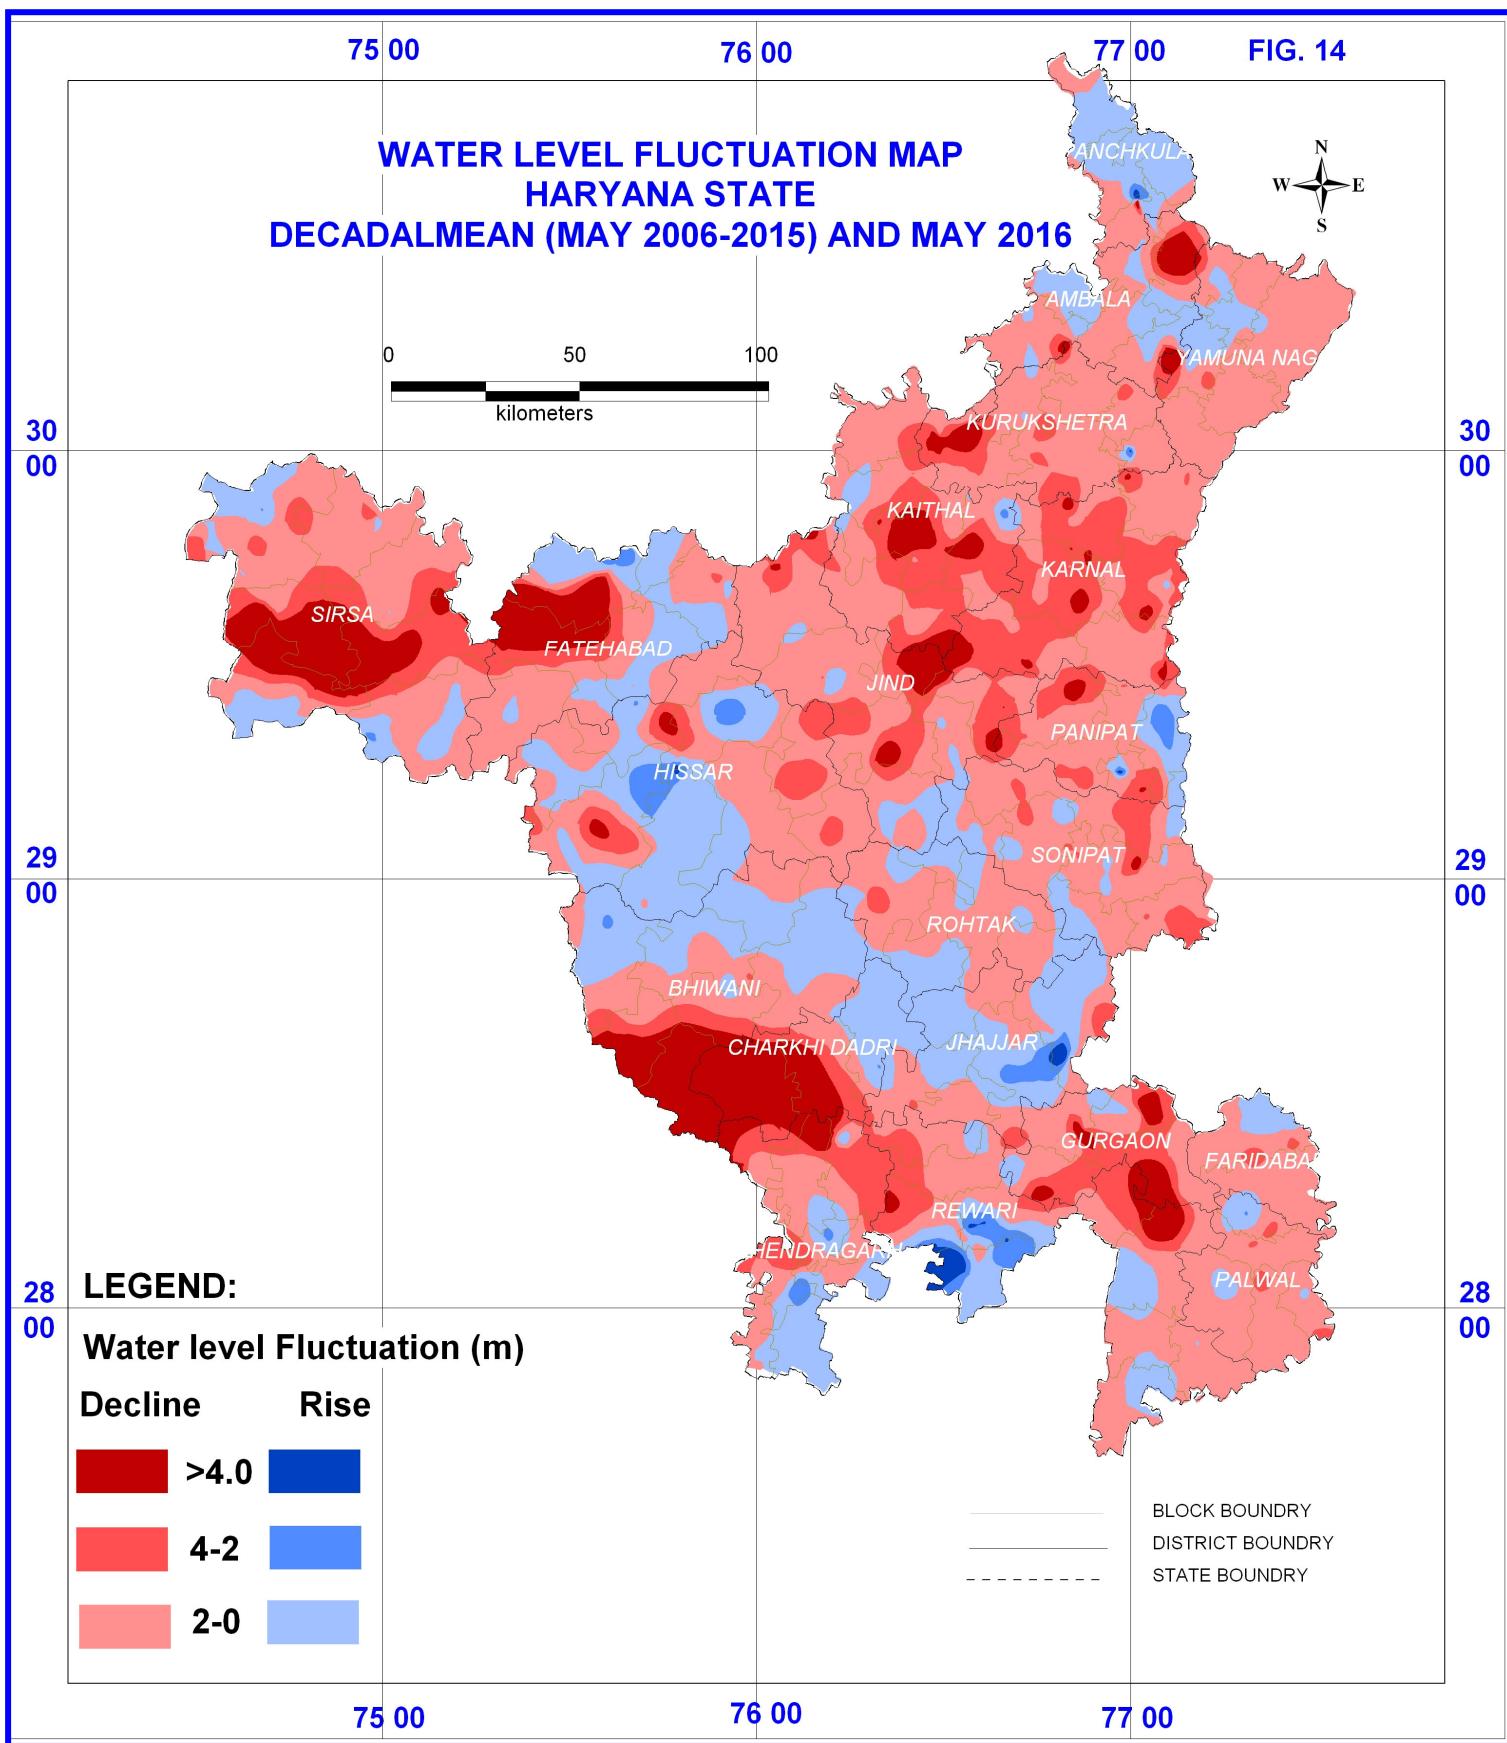

The behaviour of water level over the period under reference is discussed in following paragraph along with map (Fig. 14) and data are given in (Annexure-IV Col-4).

The interpretations of decadal mean fluctuations so arrived at indicate water level decline in 76% of wells which covers about 76% area in all districts of the State. Water level decline in the range of 0-2m has been reported from 55% of the wells covering 52% of area of the state, Water level decline between 2-4 m has been reported from 13% of wells covering 16% area of the state. Water level decline of more than 4m has been observed in 8% wells and 8% of the area of state.

The water level rise has been observed in 24% of wells and 24% area in Panchkula, Ambala, Sirsa, Hissar, Bhiwani, Charkhi Dadri, Jhajjar, Rohtak, Mahendragarh and Rewari districts. Water level rise in the range of 0-2m has been observed in 21% wells covering 22% area of the state. Water level rise between 2-4 m has been observed patches in small patches in 2% wells and 2% area of the state. Water level decline of more than 4m has been observed in 1% wells and <1% of the area of state.

FIG. 14

3.5.2 MEAN AUGUST (2006:2015) & AUGUST 2016

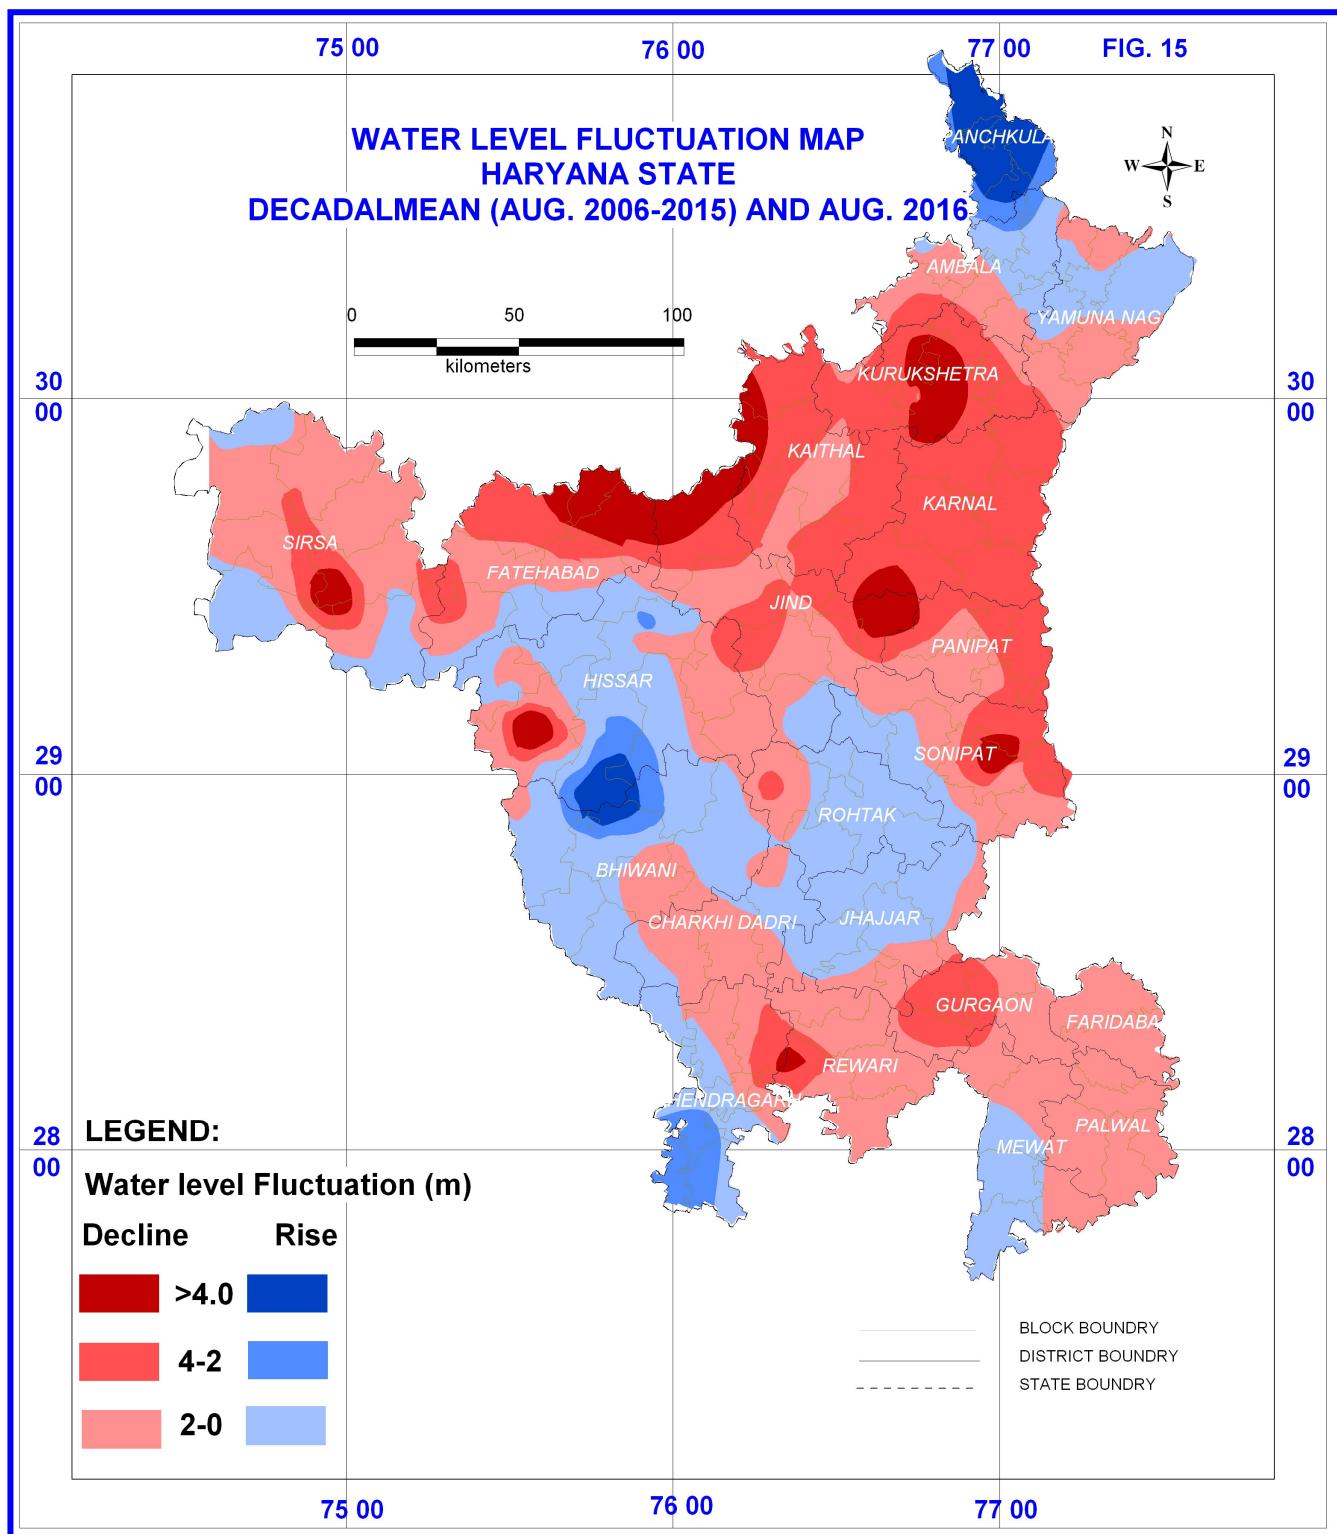

The behaviour of water level over the period under reference is discussed in following paragraph alongwith map (Fig.15) and data are given in (Annexure-IV- Col. 5).

The interpretations of decadal mean fluctuations indicate water level decline in 55% of wells monitored and about 67% area of the State falling in Yamunanagar, Ambala, Kurukshetra, Kaithal Karnal, Panipat, Sonipat, Jind, Fatehabad, Sirsa, Hissar, Bhiwani, Charkhi Dadri, Mahendragarh, Rewari, Gurgaon, Faridabad and Palwal districts . Water level decline in the range of 0-2m has been reported from 35% of the wells covering 39% of area. Water level decline between 2-4 m has been reported from 12% of wells covering 22% area of the state. Water level decline of more than 4m has been observed in 7% wells and 5% of the area of state.

The water level rise has been observed in 45% of wells and 33% area Panchkula, Ambala, Yamunanagar, Sirsa, Fatehabad, Hissar, Bhiwani, Charkhi Dadri, Jhajjar, Rohtak, Mahendragarh, Rewari and Palwal districts. Water level rise in the range of 0-2m has been observed in 40% wells covering 28% area of the state. Water level rise 2-4m has been observed small patches in small patches in 4% wells and 3% area of the state. Water level rise >4m has been observed small patches in small patches in 2% wells and 2% area of the state.

FIG. 15

3.5.3 Mean November (2006:2015) & November 2016

The behaviour of water level over the period under reference is discussed in following paragraph along alongwith map (Fig.16) and data are given in (Annexure-IV- Col. 6).

The interpretations of decadal mean fluctuations so arrived at indicate general water level decline in 67% of wells and 79% area of the State falling in Panchkula, Ambala, Yamunanagar, Kurukshetra, Kaithal Karnal, Panipat, Sonipat, Jind, Fatehabad, Sirsa, Hissar, Bhiwani, Charkhi Dadri, Mahendragarh, Rewari, Gurgaon, Mewat, Faridabad and Palwal districts . Water level decline in the range of 0-2m has been reported from 37% of the wells covering 41% of area of the state. Water level decline between 2-4 m has been reported from 17% of wells covering 23% area. Water level decline of more than 4m has been observed in 13% wells and 15% of the area of state.

The water level rise has been observed in 33% of wells and 21% area falling in Hissar, Bhiwani, Rohtak, Jhajjar and a few isolated patches in other districts. Water level rise in the range of 0-2m has been observed in 28% wells covering 20% area of the state. Water level rise of 2-4m has been observed in 3% wells and 1% area of the state. Water level rise of >4m has been observed in 2% wells and <1% area of the state.

3.5.4 Mean January (2007:2016) & January2017

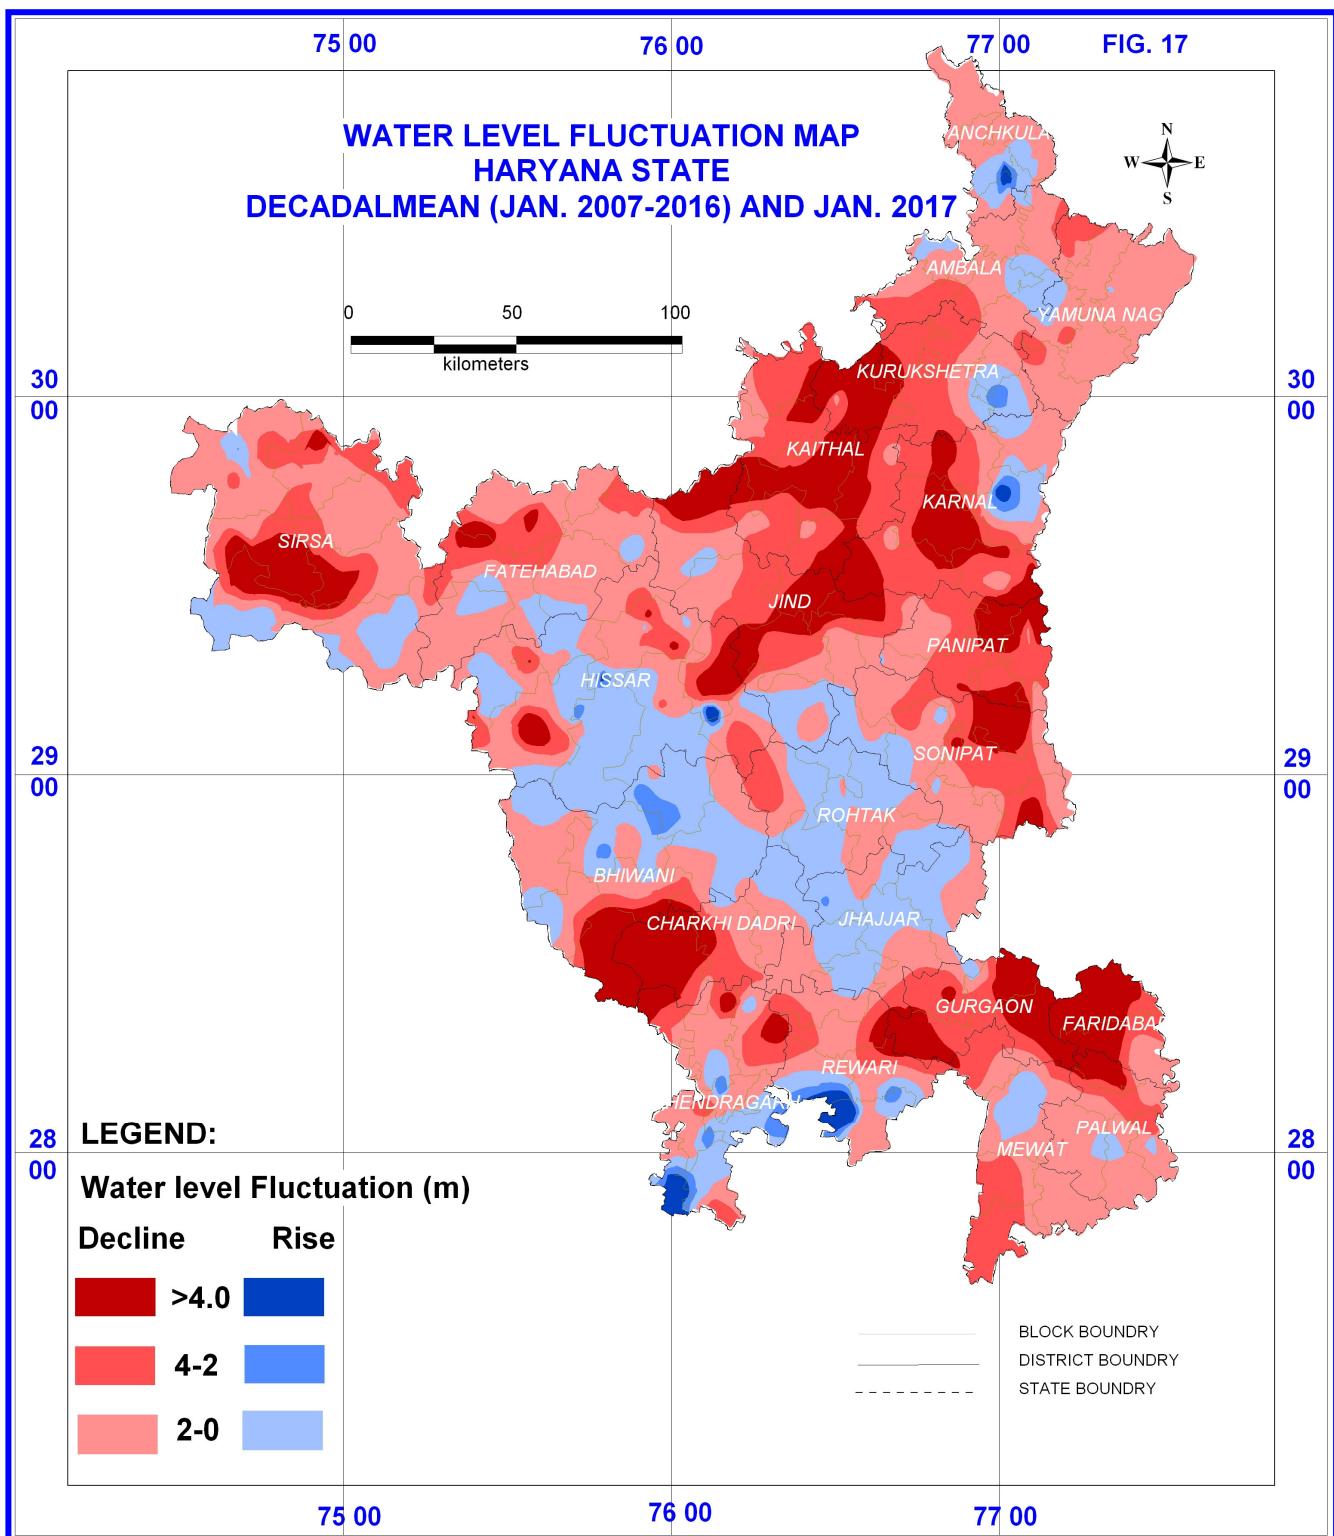

The behaviour of water level over the period under reference is discussed in following paragraph along alongwith map (Fig.17) and data are given in (Annexure-IV- Col. 7).

The interpretations of decadal mean fluctuations so arrived at indicate water level decline in 72% of wells which covers about 73% area of the State falling in Panchkula, Ambala, Yamunanagar, Kurukshetra, Kaithal Karnal, Panipat, Sonipat, Jind, Fatehabad, Sirsa, Hissar, Bhiwani, Charkhi Dadri, Mahendragarh, Rewari, Gurgaon, Mewat, Faridabad and Palwal districts. Water level decline in the range of 0-2m has been reported from 30% of the wells covering 43% of area of the State. Water level decline between 2-4 m has been reported from 21% of wells covering 14% area of the state. Water level decline of more than 4m has been observed in 20% wells and 16% of the area of state.

The water level rise has been observed in 28% of wells and 27% area falling in Hissar, Bhiwani, Rohtak, Jhajjar and a few isolated patches in other districts. Water level rise in the range of 0-2m has been observed in 25% wells covering 24% area of the state. Water level rise of 2-4m has been observed in 2% wells and 2% area of the state. Water level rise of >4m has been observed in 1% wells and <1% area of the state.
